# How fast is RoboMail?

What is this?

Inter7 set up two RoboMail machines to clock how fast the package could send and receive messages. This speed trial represents perfect conditions but not practical ones.
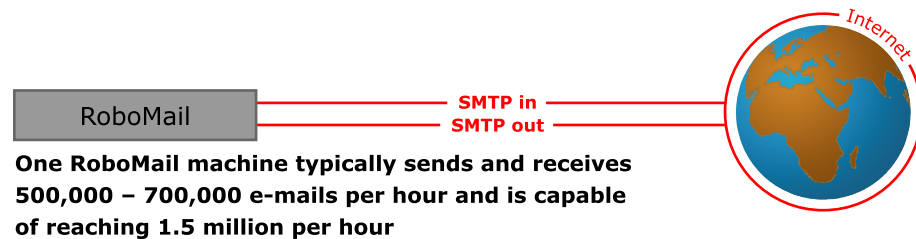

Today, our customers report rates of 500,000 – 700,000 e-mails per hour, with some reporting as many as 1.5 million per hour.

Call our toll-free number or visit inter7.com for more information.

LAN Benchmarks

| RoboMail #1 | — SMTP — | switch | — SMTP — | RoboMail #2 |

Sent 7.3 Million e-mails per hour

Received 7.3 Million e-mails per hour

WAN Benchmarks

RoboMail — SMTP in / SMTP out — Internet

One RoboMail machine typically sends and receives 500,000 – 700,000 e-mails per hour and is capable of reaching 1.5 million per hour
