Meeting your business objectives, driving your business into the future.

**DigiCore**  
FLEET MANAGEMENT

# Introduction

In today's economy, companies realise the need for delivering the highest quality products and services to the customer as quickly as possible to sustain an advantage over their competitors. To achieve this, successful companies need to focus on "Core Competencies" that directly help them meet their business objectives. The DigiCore Information Bureau (DiB) can help you meet your business objectives by providing the tools and services to allow your company to concentrate on your core business into the future.

The DiB is a 24/7/365 operation designed to optimise companies and share Fleet Management technology in one control room environment without compromising the customer's independence and identity. It allows fleet operators a cost-effective access service that adds value in terms of service and operating costs to both their own businesses and those of their clients and customers.

There is no restriction on the number of fleets that the DiB can manage, and our fleet management platform is configured to match the specific operational requirements of each fleet and not to compromise service delivery to other customers. Each fleet can have different operating modes, fleet management schedules and rules, as well as access to the vast number of system configuration options. In other words, you control the way you want the service to operate in the manner that best meets your requirements. This level of sophistication and flexibility is only available with the world-class C-track fleet management platform and service provided by the DiB.

# DigiCore Information Bureau Overview

The DIB is a division of C-track SA (Pty) Ltd and has been in operation since October 2003. It provides two primary services, namely:

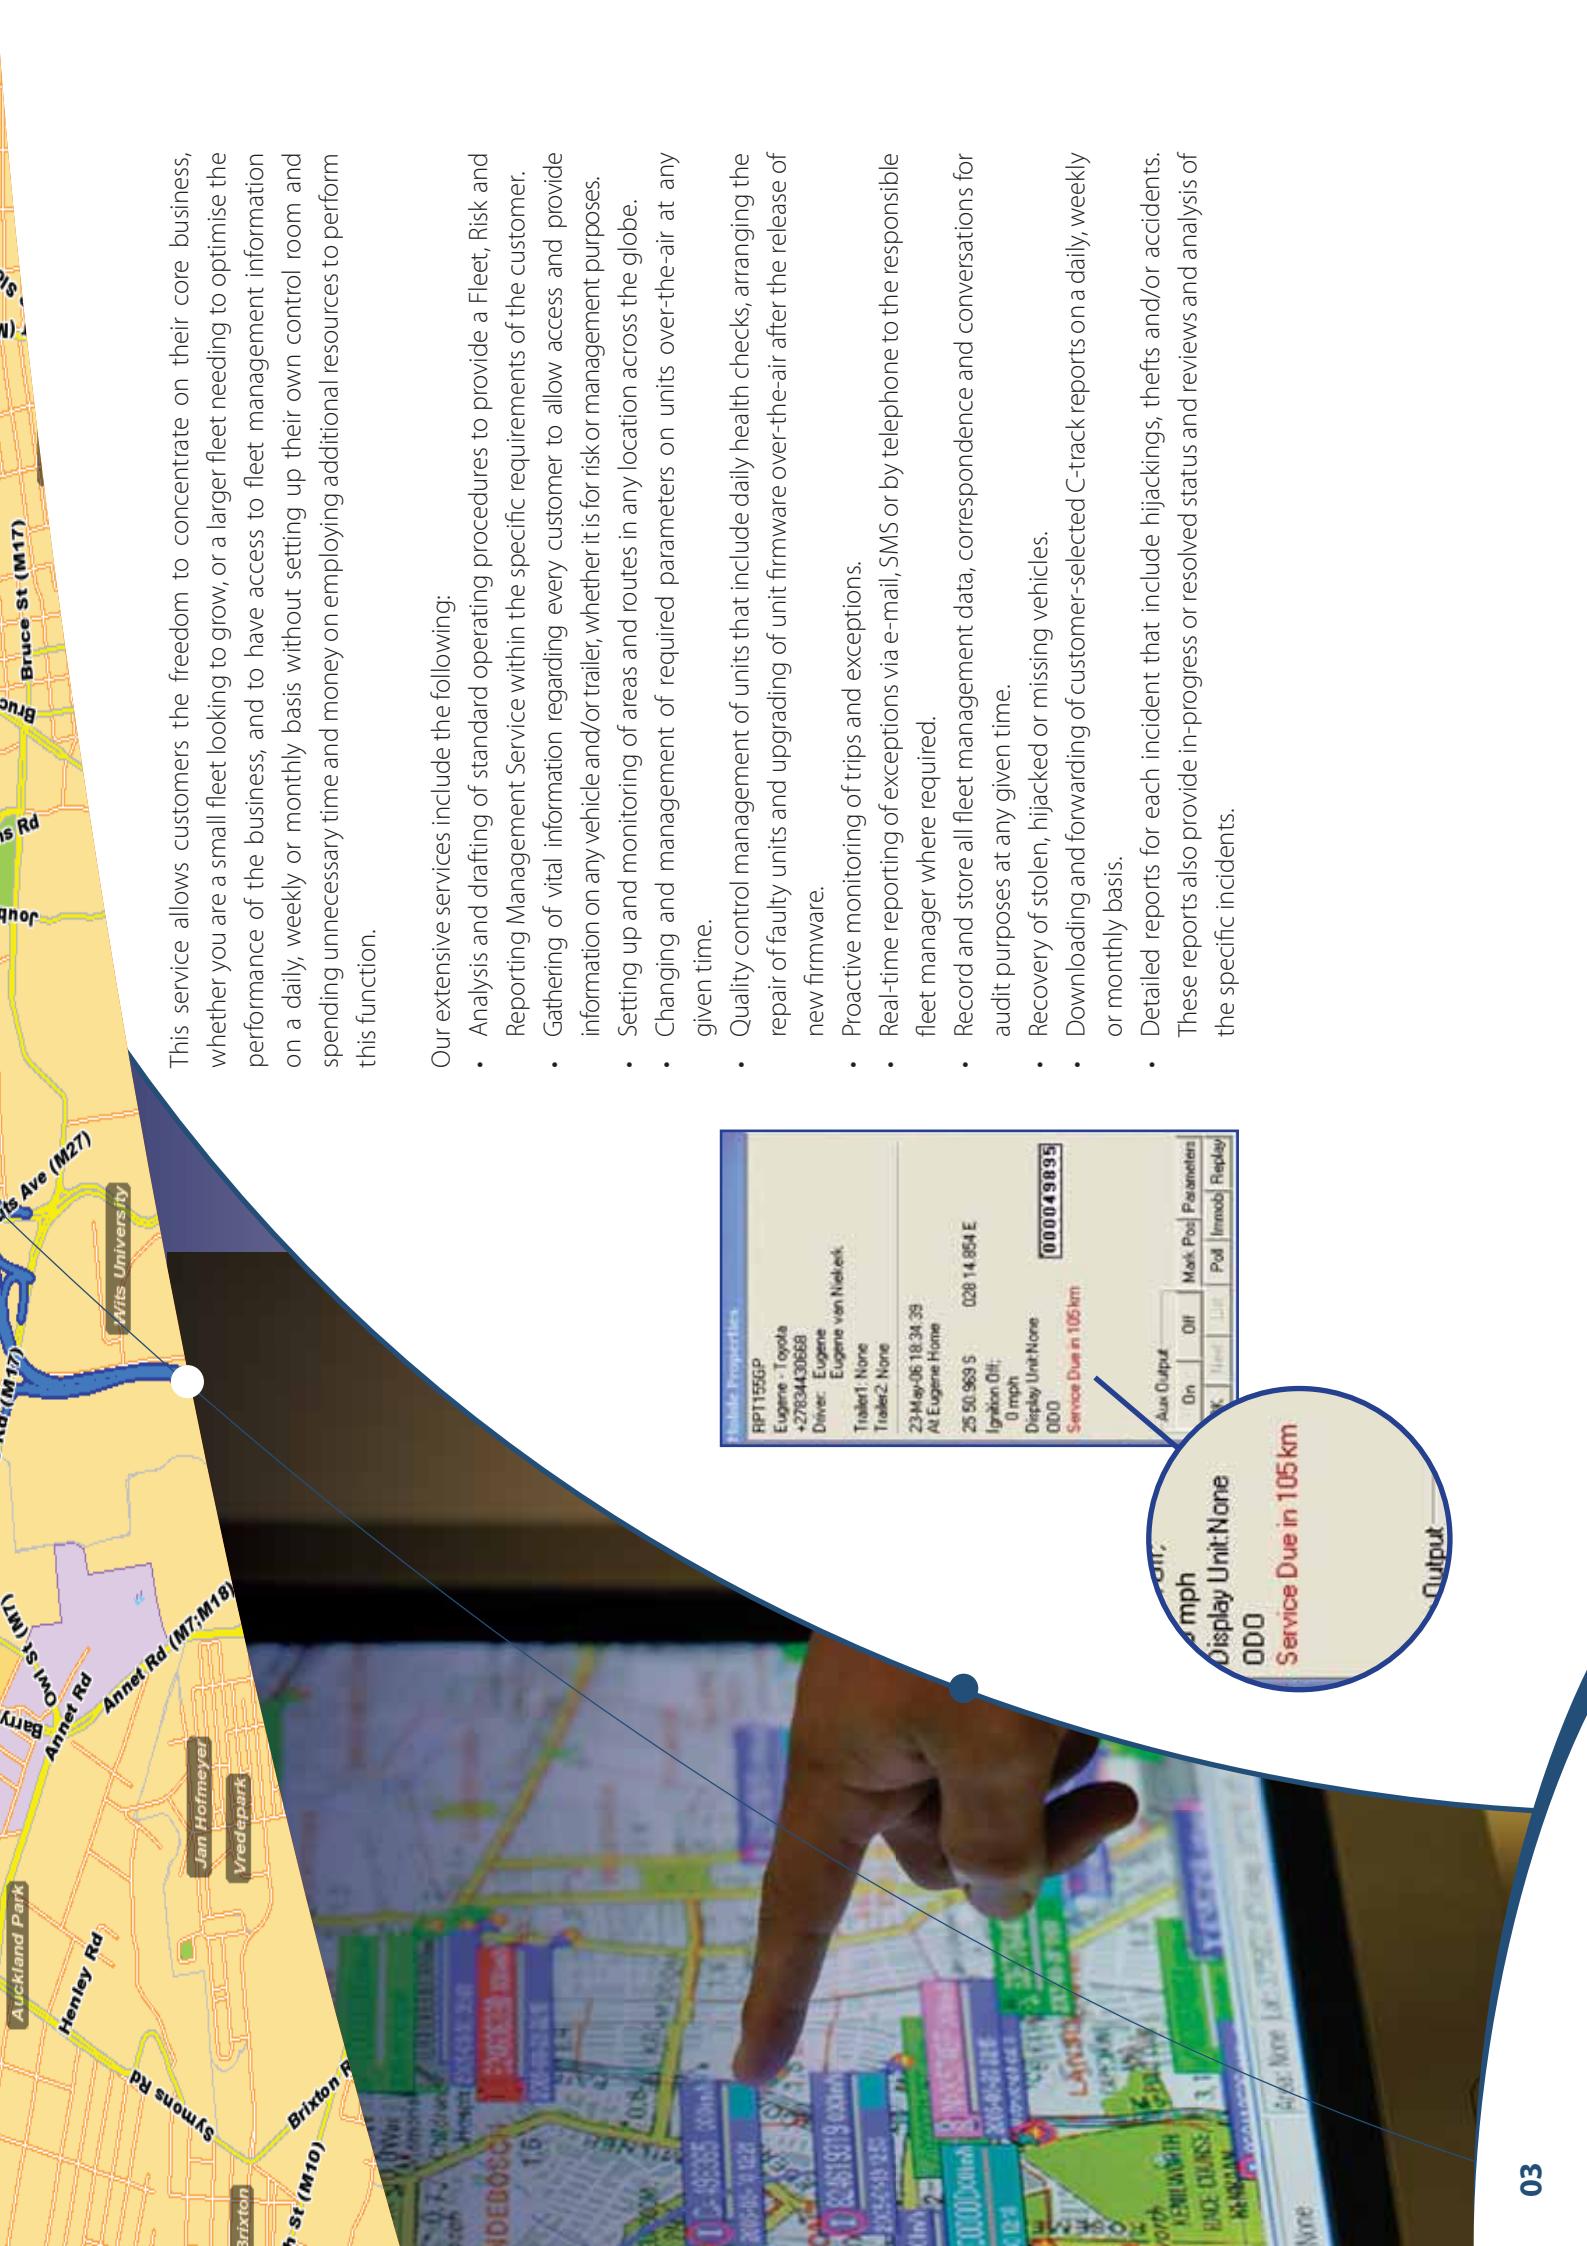

- Fleet, Risk and Reporting Management
- Stolen Vehicle Recovery

This division monitors in excess of 24,000 vehicles, producing customer required reports as well as managing the recovery of hijacked or stolen vehicles on a 24/7/365 basis. Staffing resources are planned on vehicle growth and signed contract requirements and can cater for various international languages if a contract so requires. New staff members are employed and fully trained to perform all related functions before functioning operationally. This training is comprehensive and includes operational aspects such as monitoring, reporting, recovery management and technical support for C-track software and hardware products.

## **2.1 Fleet, Risk and Reporting Management**

The DIB provides an extensive 24/7/365 proactive Fleet, Risk and Reporting Management Service. The DIB has an outstanding, fully trained team that is experienced in planning, implementing and the successful delivery of Fleet Management solutions worldwide. With a thorough knowledge of the industry, the DIB understands the customer's complex requirements and will implement solutions and procedures, in collaboration with the customer, to minimise risks and maximise return on investment in order to assist the customer to meet their objectives and positively contribute to the growth of their business.

## 2.2 Stolen Vehicle Recovery Management

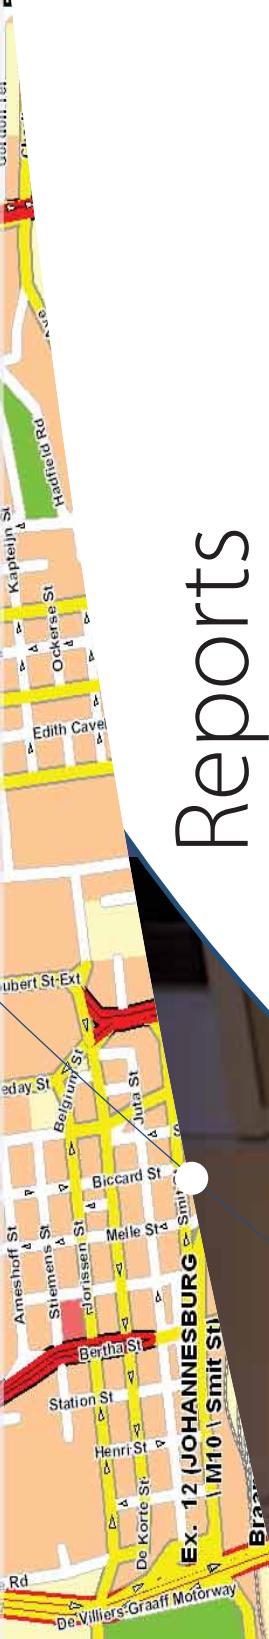

The DIB provides an extensive 24/7/365 proactive Stolen Vehicle Recovery Service (SVR). This service has managed to maintain a recovery rate of above 90%, 20% higher than the 70% South African expected industry rate. Alarm exceptions are monitored for various different types of fleet assets for companies in Africa and in other continents where required.

The DIB has an extensive recovery network throughout southern Africa. The resources include the availability of helicopters on an ad hoc basis in the three major South African metropolitan cities and Ground recovery teams that are strategically spread across the country. Ground recovery teams are also based in Mozambique, Zimbabwe, Botswana, Zambia and Namibia to recover vehicles that have already crossed the borders. Networking structures are also in place throughout Europe to provide resources for recoveries if required.

Our SVR services include the following:

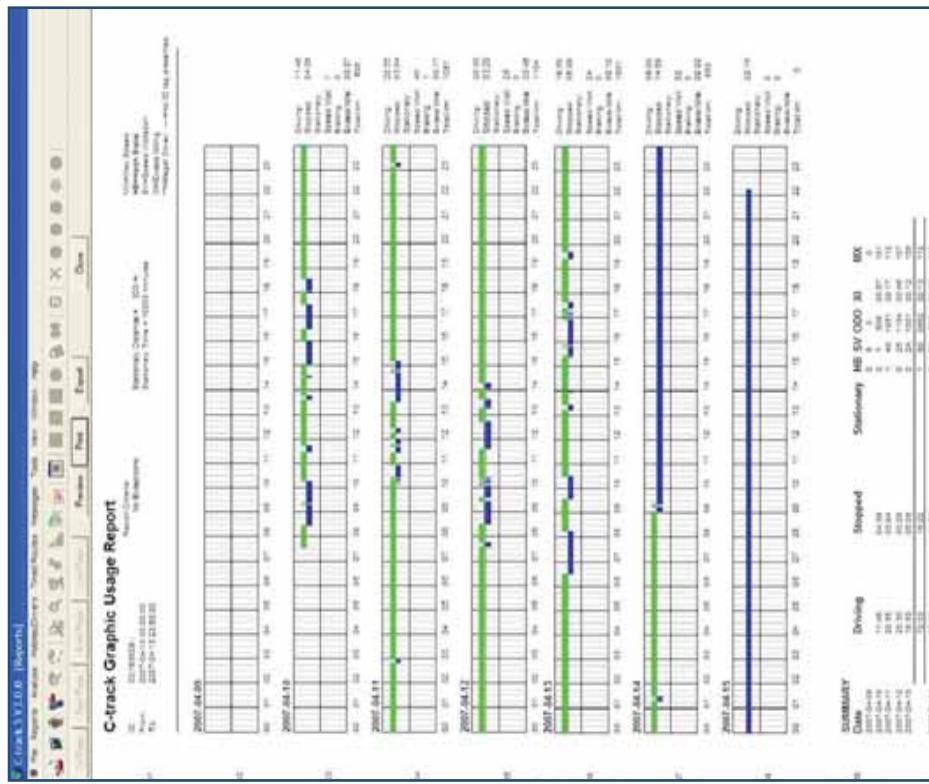

- Protocols for alarm monitoring, response and reporting are pre-defined by clients and enforced by DIB. The DIB consults with clients to create escalating response protocols, which can easily be modified if necessary. Protocols and systems are pre-determined so that key personnel can be reached at the office, at home or on the road.
- Immediate implementation of the response protocol, which includes contacting key personnel or the authorities identified by the client, in the specific order specified by the client when an exception alarm is received.
- Activation of recovery teams and monitoring of the recovery process until the vehicle is recovered or the search is called off
- Safeguarding of the vehicle until the customer collects or requests that the vehicle must be towed away.
- Free towing of recovered vehicles and storage at a safe venue, should it be requested by the customer. Storage fees will only be charged after 24 hours of storage.
- Detailed reports for each incident that include hijackings, thefts and/or accidents. These reports also provide in-progress or resolved status and reviews and analysis of all SVR related incidents.

## Reports

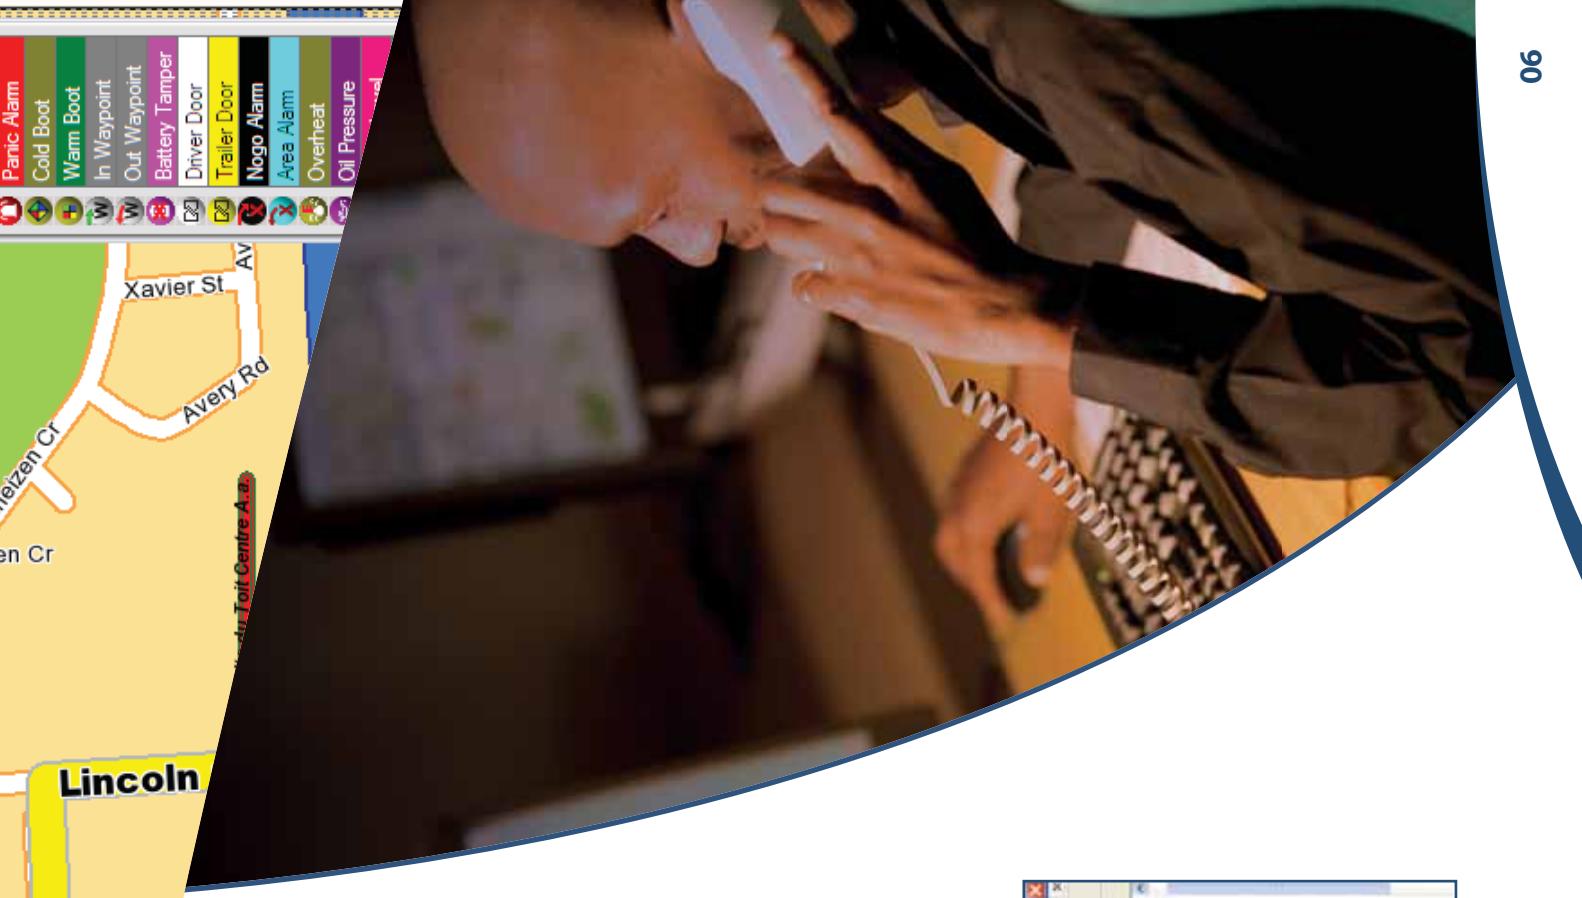

In addition to monitoring vehicle and asset movement and activity, the DIB Service offers standard and customised reporting features. With this valuable information, a customer can enhance resource management of both people and assets through productivity gains. Reporting features also provide a forensic trail in the event of theft, hijackings or accidents.

## Summary Usage Reports

## Monthly Comparison – Violation Trend Report

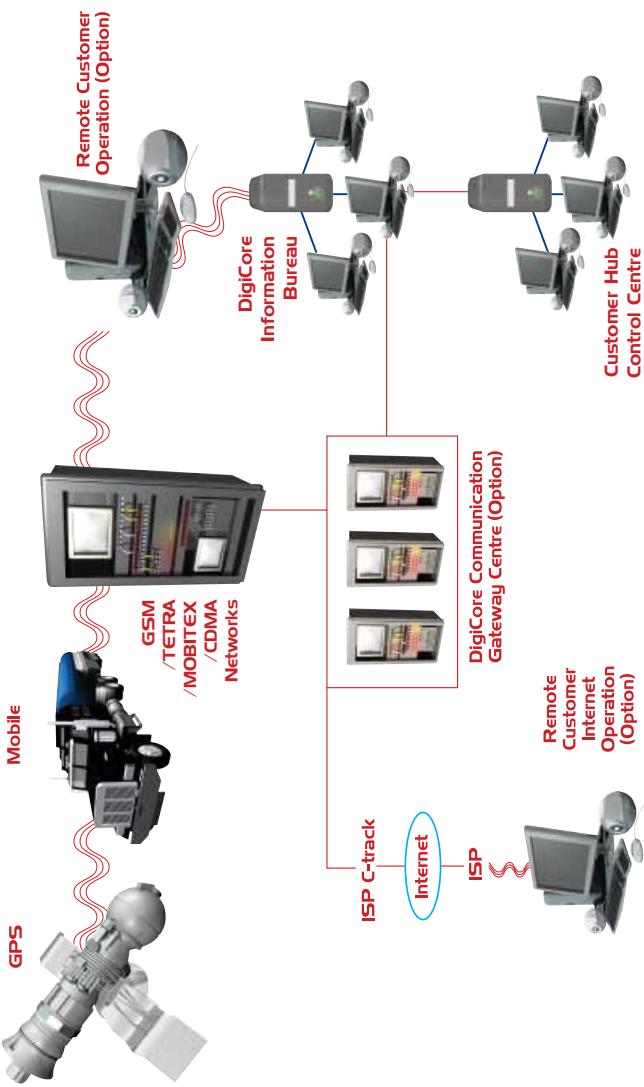

## The following reports are available:

- **DMM Tacho Report:** Continuous high resolution second-by-second recording of speed and RPM which can be cross-referenced to a geographical location.
- **Graphics Usage Report:** 24-hour vehicle productivity is displayed graphically with data summaries such as time driven, kilometres travelled, exceptions and so on.
- **GYR Report (Green, Yellow, Red):** The GYR Rating Report is a new report based on the existing C-track Driver Rating Report. This new report displays driver ratings in a graphical manner. The weights that influence the driver ratings are set in the System Parameters; so that access control can be applied to those ratings (users with password rights to change system parameters can change the ratings).
- **DMM Utilisation Report:** Managing vehicle usage and optimising availability to enhance productivity.
- **Movement Report:** Historical trip information such as exceptions, speed, locations, odometer and so on can be reviewed.
- **Full Usage Report:** Trip-by-trip analysis of the day's activity and usage. It displays information such as trip start and trip end times, driving times, distances travelled, and trip violations, etc.
- **Summary Usage Report:** It provides a detailed summary of each vehicle's activities, i.e. speed, location, etc. for a specified period.
- **Vehicle Comparison – Violation Trend Report**
  - Report A: Excess Idle and Drive/Stop Comparison.
  - Report B: Total kilometre Driven Comparison, Total Trips Comparison and Harsh Braking Comparison.
  - Report C: Over-revving Comparison, Total Speed Violation Comparison and Total Excess Idle Time.
  - Report D: Monthly Violation Trend Report (All Comparisons).

# C-track Technology at a glance

Using GPS and GSM technology, we take care of downloading data and safe storage of this information, from many of our installed C-track products. Our advanced communication technology allows the customer several different options to monitor and have control over their fleet as indicated in the diagram below:
