Sutus Business Central 200 is a complete office communications solution that consolidates three key business applications – voice, data and networking – for businesses under 25 employees. These collaborative tools are integrated into one enterprise-quality solution that is affordable, secure and easy to install - with no hidden IT, integration, software, or training costs.

This cost-effective solution has the network infrastructure, file and data sharing capabilities, telephone system features and collaboration tools a business needs to work more efficiently - with no hidden IT, integration, software, or training costs. Innovative web based workspaces provide the same level of access to employees at the office, at home, or on the road.

Business Central 200 is standards compliant. It works with Windows, Mac, and Linux PCs and integrates with applications such as Microsoft Outlook, Entourage, and Apple Mail. Fully integrated telephone handsets ensure seamless access to features like auto attendant, voice messaging and conferencing. Business Central products are designed for small business and can be installed and managed by non-technical personnel.

Simply managed, simply used!
