BCG Systems Ramps Up Operations For Global Belting Technologies

Akron, Ohio—September 17, 2007—BCG Systems, Inc. announced today another successful business management software implementation, this time for Global Belting Technologies, a state of the art provider of high quality conveyor belting for industrial operations. The solution BCG Systems designed incorporates Microsoft Dynamics GP and integrated container tracking software.

Rapid growth had stretched Global Belting Technologies' entry-level accounting software to its limits. Inventory and container shipments were tracked manually using an extensive series of spreadsheets. Management began looking for an integrated system that could manage inventory, billing, and shipping in one cohesive system. The company sought recommendations from its accounting firm, and was directed to BCG Systems of Akron, Ohio.

"We liked the fact that they sold two systems and could advise us which would be a better fit," said Scott Phillips, operations manager. "BCG took the time to come out and learn our business model, and then presented us with a solution that covered all of our requirements."

BCG Systems proposed a solution based on Microsoft Dynamics GP and incorporating the integrated Container Management solution from Blue Moon Industries to manage the movement of goods from Global Belting Technologies' manufacturing operations overseas to their customer locations in North America.

Now the company is able to build a manifest that specifies what is in each container, even when the contents originate from multiple purchase orders and are going to different customers. Staff can update the location of the goods on the manifest, and when received, the goods automatically post into the Dynamics GP purchase order receipts.

The integrated solution means Global Belting Technologies can invoice its customer earlier, when the product leaves the factory, substantially improving cash flow. Efficiencies in the billing process have shaved up to two hours of processing time per invoice.

Philips attributes much of the success of the company's solution to the diligence and expertise of BCG Systems' consultants. "It's just what we needed," he said, "All the parts of the puzzle are in one system and talking back and forth to each other."

About BCG Systems, Inc.

Headquartered in Akron, Ohio, with offices in Atlanta and Nashville, BCG Systems, Inc. is a single-source provider of business management software, hardware, and infrastructure planning. Nationally recognized for providing exceptional information management solutions and service, BCG Systems designs, implements, and supports cost effective ERP, CRM, and networking systems—in addition to custom applications and Web development. BCG Systems, Inc. employs certified professionals who combine experience, commitment, and ingenuity to maximize the return on each client's technology investment.
