

Mike puts buses in their place, wirelessly, affordably

APPLICATION GPS & RTLS YARD MANAGEMENT

Web-based, carrier grade MOBILEFusion™ Asset Tracking platform creates a bridge between systems—and AppLocation tracks your assets wirelessly, using the latest in satellite, CDMA, GPRS, RTLS, mapping, and network management technologies.

Whether it is a vehicle locating system with a fixed kiosk for staff to find assets by item number or parking space, or a web-based application to deliver location data to a handheld device, or whether you need text messaging, and mobile forms with ERP integration or to locate a worker via A-GPS enabled cell phone; AppLocation has a solution designed for your operation. We provide the glue to bring it all together and get the communication going. Seamlessly.

"There is a lot of expensive proprietary technology on the market but (the) AppLocation system does the job at a lower cost and was designed to be integrated with Transit's existing technology".

Ron Drolet, Senior Vice President BC Transit

Designed for maximum flexibility, carrier grade MOBILEFusion™ interfaces with mapping tools and databases for end to end supply chain and logistics visibility. One platform enabling the convergence of RFID, GPS and LBS.

Please call for more information >>>

- GPS parking accuracy to 1 meter plus wide area tracking benefits
- Affordable tag to tag RFID RTLS for covered yards and systems where wide area mobile tracking not required.
