

## POLICY AND COMPLIANCE

As business becomes more reliant on email the requirement to control content entering or leaving the email infrastructure is increasing. Due to the instantaneous nature of email and its vast reach, the risk to business and brand from inappropriate email content such as intellectual property, harassment terms or employee information is great. Add to that the growth in both public and private sector regulatory compliance measures in the form of recent EU Directives, SOX, HIPAA, GLBA, and Visa CISP and it is obvious that business is faced with a massive challenge.

The MXSweep Policy and Compliance engine enables business to address the issue of confidential, malicious or inappropriate email content by providing an easy to use and cost effective tool to monitor company email for compliance to "acceptable use" corporate email policies.

# MXSWEEP DELIVERS ON

**Policy** – Using an easy to use management interface, Policy Management options allows for best practice rules to be created in accordance with acceptable use corporate email policies and any relevant regulatory compliance measures

**Compliance** – All inbound and outbound emails are scanned and where a policy rule has been triggered the defined action takes place to ensure compliance

# **BENEFITS**

#### For the Business

- · Adherence to public and private regulatory compliance measures
- Reduces risk of litigious activity or the dissemination of sensitive information
- Aids enforcement of "acceptable use" policies

#### For the IT Manager

- Allows rules to be configured to meet local requirements
- Reporting features provide visibility and confidence in the service effectiveness

#### For the End User

- Protects users from offensive, racial or sexual harassment terms
- Prevents the distribution of sensitive employee information

MULTIPLE POLICIES ON BOTH INBOUND AND OUTBOUND EMAIL ALLOW BUSINESSES TO RETAIN CONTROL OF EMAIL.

REGULAR EXPRESSIONS ALLOW I.T.

ADMINISTRATORS TO WRITE CUSTOM FILTERS.

Anti-Racial
Dictionaries Protect
Businesses from
Litigation

## How IT Works

Using an easy to use intuitive interface, the administrator creates a number of policies using the power of regular expressions to ensure that email content is in accordance with "acceptable use" corporate email policies and any relevant regulatory compliance measures. These polices can then be applied to both inbound and outbound email.

In creating the rule, a condition can be checked against a number of predefined dictionaries or using the regular expression builder, administrators can create their own advanced expressions as search criteria. Examples of conditions include the attachment name, the email body or the subject header. By assigning for example, the pre-defined abusive language, racial slur or Common Video file extension dictionaries to the condition, email is scanned to ensure that the rule is not triggered

Where email content triggers one of the regular expression rules ,the action assigned to the rule determines the action. This could include but is not restricted to copying the email to the Finance Director, removing the file attachment or storing a copy in the Approval Box.

The Approval Box acts as a quarantine where messages are stored pending approval by administrator
