

MXSweep

MXSWEEP – PURIFY YOUR EMAIL

MXSWEEP OPPORTUNITIES FOR PARTNERS

As a global Managed Service Provider, MXSweep delivers secure filtering of corporate & institutional email to a global client base, based on a subscription payment business model. With a quality-of-service focus, we eliminate SPAM, Viruses, Phishing attempts, and other email-borne threats before they can impact the business. MXSweep's go to market strategy is primarily focused on the channel, harnessing the distribution and reseller value chain to effect global service delivery.

Accredited Partners benefit from

- High margin recurring revenue stream
- White Label option allows you to market the solution as own
- Competitive pricing structure backed up by market leading retention rates
- Access to the hosted market that is expected to quadruple to \$4.5 billion by 2012

MXSWEEP DELIVERS ON

Email Protection – By combining best of breed vendor detection engines with in house filtering techniques we deliver industry leading detection and low false positive rates

MXSWEEP – PURIFY YOUR EMAIL

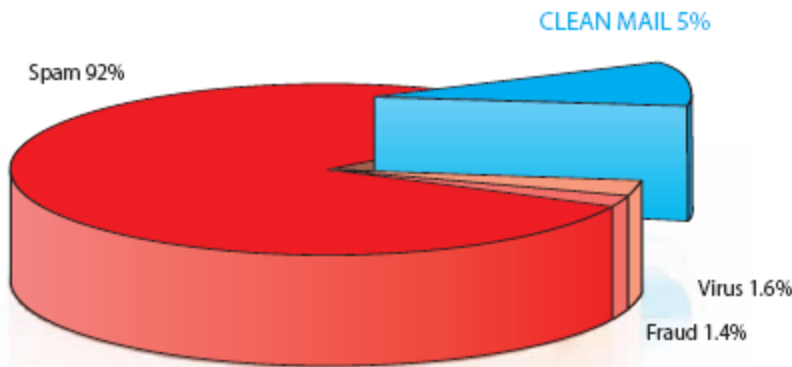

MARKET TRENDS

The world market for content filtering was estimated at \$1.31 billion in 2005 and is predicted by Frost & Sullivan to reach \$4.86 billion by 2012, with recent reports from Gartner confirming that efficient and accurate spam and virus filtering with low administration overhead remain essential to buyers.

Gartner also report a rapid decline in interest in traditional software products in favour of appliances and service provider offerings. It is expected that the market share of the service provider delivery model will accelerate from 20% in 2005 to 40% in 2009 driven by increased market awareness and acceptability of the hosted model. While hosted email filtering is now being adopted by businesses of all sizes, this model is particularly popular among small to medium business enterprises, where the cost of maintaining hardware or software based on premises solutions is difficult to justify.

WHITE LABEL MXSWEEP

To date MXSweep's go to market strategy has primarily been a channel based one, harnessing the distribution and resale value chain to effect global service delivery. More recently we have begun to explore technology partnerships with a selection of major players who wish to incorporate email filtering into their portfolio of managed services. Typically these organizations fully understand the merits of email filtering but have no interest in the box-shifting approach, i.e. physically installing email filtering appliances or software. It then becomes a decision to build or buy but once the complexities of developing a service in-house from a standing start are realized, that option is quickly eliminated
