

Together We Can

- * Save you time and money
- * Maximize P4P opportunities
- * Increase per patient revenue
- * Improve quality healthcare
- * Enhance your relationships with patients
- * Provide decision support at the point-of-care
- * Increase care team productivity
- * Easily measure & report

“DocSite just helps us do what we do better.”

- Julie Tunney, Office Manager

A simple effective solution at an affordable price

For physicians by physicians. DocSite Registry™ demonstrably improves care with minimal disruption to office workflow for a modest price. DocSite Registry is an online patient-centric registry bringing evidence-based medicine to the point of care without stifling each physician’s individualized approach to practice.

Nothing can replace a physician’s mind, skills and instincts, but technology can deliver relevant information when and where clinicians need it most. Patient-care focused and quality driven, DocSite Registry helps physicians solve specific clinical challenges for their most complex patients using the best information available at the point of care. One patient at a time, one success at a time.

Success One Patient at a Time

Physicians use the registry to manage chronic, complex and preventive health needs for individual patients or entire patient populations. DocSite Registry summarizes relevant clinical information from the patient record and graphically highlights condition-specific clinical indicators that are due or out of range to save time during office visits, and supports proactive management of patient health needs.

Measure and report

DocSite Registry allows you to measure and track the care of one patient, as well as populations of patients in your practice. Participate in any clinical integration, health collaborative or quality-based initiative with confidence knowing you have been managing patients using nationally recognized evidenced-based guidelines aligned with outcomes measures.

Pathway to the future

DocSite Registry is one of many applications within DocSite’s ConnectHealth™ suite. Completely integrated yet designed to work effectively by themselves, you can start with the registry and then progress to electronic prescribing or full EHR capabilities when you are ready. The ConnectHealth suite provides a logical pathway to incorporating technology into your practice when and how you need it without emptying your bank account or frustrating your staff. Prices start at \$50 per provider per month. Why not start today?

Benefits to You

- * Saves time, improves care, increases revenue
- * Easy reporting for P4P and quality initiatives
- * Easier chart review, pre-organized information specific to patient
- * Engage patients to become active in their own care
