Fueling Growth

Homeowner Preferred. Easily Transported.
Domestically Produced. Nationwide Presence.
Half the Cost of Electricity. Dependable. Fully
Funded Systems for Qualified Developments.
24-Hour Call Center. Any Size Development.
Anywhere. Unmatched Financial Strength.

Blue. It's the new Green.

What we do.

HBH Gas Systems and Ferrellgas have joined in a strategic partnership to provide **centralized gas service** to new developments in any location where **natural gas is not available** due to line extension price constraints or insufficient natural gas infrastructure.

A central gas distribution system serves multiple homes from a single tank. These systems have **proven track records** providing **quality service** to developments of all sizes. HBH Gas Systems coordinates all details to provide your development with a fully funded and fully engineered, state-of-the art, **turn-key system**.

Gas. Exceptional Energy.

Why use propane gas?

Increased Marketability

Research indicates that the vast majority of **homeowners prefer dual-fuel homes**. Gas improves living standards through lower utility bills and increased comfort and convenience.

Environmentally Safe

Propane is a remarkably clean-burning fuel. It is non-toxic to water and is an **EPA-approved alternative "Green" energy**. Instead of building all-electric homes, reduce your development's reliance on the carbon-heavy, inefficient electric grid by installing a central gas distribution system.

Economical

About **half the cost of electricity** per BTU, propane provides great economic benefits to your customers. Homeowners spend about half as much money heating their homes with propane instead of electricity.

Dependable

Propane is easily transported and is produced here in the United States. Since it is produced domestically, a **secure supply is always available**.

Underground Tank Installation

Completed Above-ground Tank

How much will
it cost you?

Nothing.

When should you
contact HBH?

Now.

Where can these
systems be installed?

Anywhere.

HBH Gas Systems and Ferrellgas are committed to providing the best quality gas and energy systems to consumers, **typically at no cost to developers**. HBH and Ferrellgas fund, design, engineer, and construct the system. There is absolutely no liability to the builder or the developer. In extremely well-qualified developments, the home-builder's only cost is for the traditional yard-line connections.

The sooner you bring HBH Gas Systems and Ferrellgas onboard, the sooner we can begin the preliminary design of your system and become integrated into your construction schedule. We will immediately provide the **solution to your balanced-power equation**.

Who we are.

Backed by our years of development, construction and utility experience, HBH Gas Systems is the **nation's leader** in the implementation of central gas distribution systems.

Ferrellgas is the **world's third largest propane gas company** and the 17th largest energy company in the US - with round-the-clock call centers, over 600 locations nationwide and thousands of employees on the ground (NYSE: FGP).

Together, our local and national presence and our financial strength provide the great benefits of gas to our customers.

Tankless water heaters powered by propane can make running out of hot water a thing of the past.

In addition to serving a home's water and space heating, refrigeration, washing, drying, and cooking needs, propane can fuel:

- Gas street lamps
- Gas fireplaces
- Swimming pool heaters
- Outdoor gas grills
- Eco-friendly municipal fleet vehicles and lawn equipment
- Tankless water heaters
- Backup generators in support of renewable energy initiatives such as wind or solar generation
- Microturbines and distributed generation in support of LEED applications

Give your homeowners the security of an uninterrupted power supply with propane-powered backup generators.
