Reporting Dashboard Released for TrakQuip™ and RTMS

New reporting tool streamlines report creation

Baton Rouge, LA – January 10, 2008 – Corporate Services LLC, developers of TrakQuip™ and RTMS, the premier equipment and rental software applications, is pleased to announce the availability of the Reporting Dashboard module. The Reporting Dashboard will simplify report writing for users giving them access to data in a format they desire.

The Reporting Dashboard is written using Microsoft's .NET Framework, thus offering the latest and most sophisticated technology available. Menu options are simple to understand and security permissions are easy to administer. Another component of the Reporting Dashboard is the View Catalog. Views of all the data tables are documented using plain text. This allows users to quickly and easily identify the right data table that contains the information they need.

"Our systems house a tremendous amount of data for our clients. When businesses have access to information in a format that is meaningful they are able to make better, timelier decisions, which can have a profound impact on their business," said Michael Saint, Corporate Service's Chief Technology Officer. "While simple to use, the Reporting Dashboard is quite sophisticated. Users can embed code for complex calculations and analysis. Additionally, if a user is comfortable with a different report writer, such as Crystal Reports, they can write the report in Crystal and register it within the Reporting Dashboard to be run alongside all other reports."

Alicia Roman, manager of California-based Granite Construction Supply and TrakQuip™ client, is pleased about the release of the Reporting Dashboard to generate custom reports. "This is a great tool that has the potential to minimize our report development costs while giving us the flexibility to write our own reports," said Alicia.

The Reporting Dashboard, along with the View Catalog, is available at no charge to all clients on a current software maintenance plan. Corporate Services also offers a two-day training class on the Reporting Dashboard.
