

The FBI estimates that 1 out of every 10 laptops will be stolen within a year of purchase. GadgetTrak for Windows PC protects your system by utilizing powerful privacy-safe tracking technology to locate your PC in the event it is stolen. Whenever your PC is moved to a new location, GadgetTrak detects it and sends information directly to you including IP address, internal network address, host names as well as location and ISP data.

Privacy Safe: Big Brother Isn't Listening

Traditional location tracking solutions track each movement of a system from a monitoring center, raising serious privacy concerns. GadgetTrak utilizes privacy-safe location tracking technology that protects your privacy.

It is our belief that no monitoring center should be allowed to access a computer system, alter data on the system, or install software such as key loggers or other tools. All of the information that GadgetTrak gathers is sent directly to you, if your system is stolen you then forward the information on to us as well as the authorities with our contact details so we can work with them to get the system back.

Tamper Proof & Persistent

Our software utilizes various tactics to evade detection by a thief. Files are hidden and all communication is done silently in the background with no indication that the software is sending information. The software cannot be removed by a thief without access to the original installer and password. GadgetTrak for Windows PC is also designed to work in "hostile" network environments, even where internet connectivity is poor it will be able to send information worldwide.

1 out of every 10 notebook computers will be stolen within the first 12 months of purchase. 90% of them will never be recovered. - FBI

Laptop & mobile device theft has consistently been listed as one of the top three computer crimes among viruses and hacking according to CSI/FBI annual reports.

Laptop theft doubled in the past year, targeted laptop theft on the rise. - FBI

A laptop is stolen every 43 seconds.

In a recent study the Ponemon Institute surveyed 500 IT security professionals 81% of the respondents reported the loss of one or more computers in the previous year.

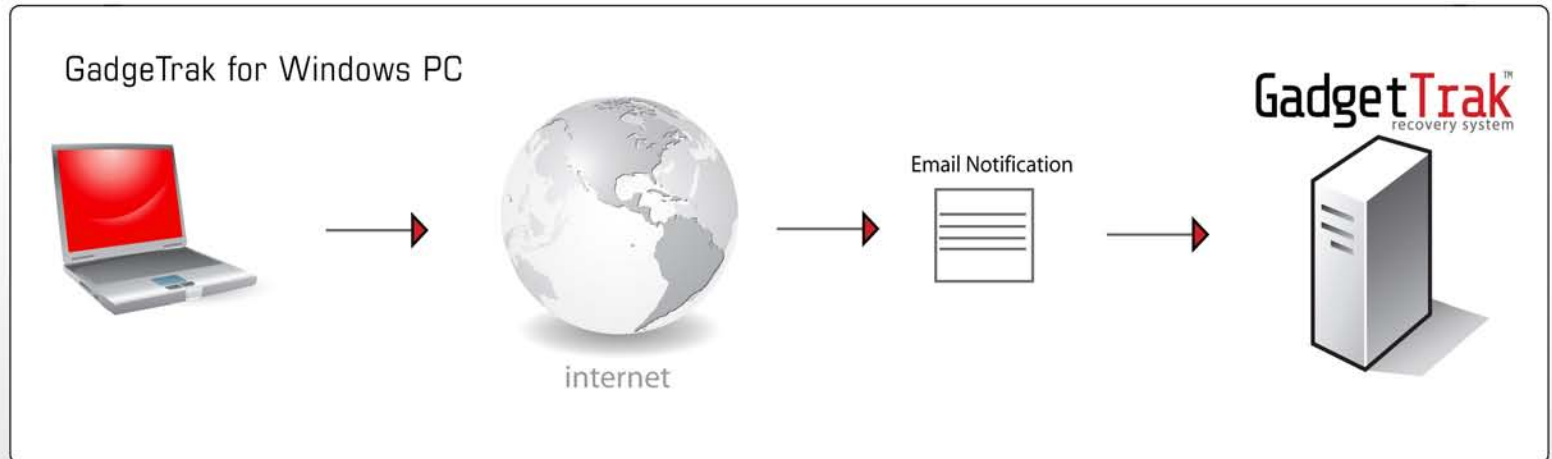

System Requirements:

Memory: 32MB or more
Operating System: Windows Vista/XP/2003/2000/NT
Free Disk Space: 500KB

How it Works

GadgeTrak for Windows PC, is a location tracking program that resides on your computer. When the system is moved to a new location it sends you the new location and network information via email. The application provides accurate tracking results including the laptop's public and private IP addresses, as well as host names. By providing the information to law enforcement the tracking results enable identification of the thief's name, phone number and address, in addition to the physical location of the stolen laptop.
