

PATIENT CARE BREAKTHROUGH ***SELF-HEATING* Total Body Cleansing System**

- Bathing system comes complete with built in warming system*. **NO MICROWAVE OR WARMING OVENS NEEDED.**
- Bathing system is warm and ready for use within 30 seconds of activation. **WHEN POUCH IS ACTIVATED, IT WILL KEEP WIPES WARM AND READY TO USE FOR UP TO 30 MINUTES.**
- The pouch temperature is regulated, enabling *EVERY* wipe to be within the correct temperature zone needed for proper patient care.
- All-In-One TempTroll® Heating System allows for easy storage and easy disposal.
- Breakthrough TempTroll® Heating System is non-toxic and easy to dispose of after use.
- All-In-One system simplifies and improves patient care while reducing costs in labor and material.
- Redi-Wash® provides a superior formula to ensure excellent patient cleansing and skin care.

The Redi-Wash® Total Body Cleansing System is simple to use. It dramatically improves patient care while reducing costs. Redi-Wash® Total Body Cleansing System – Powered by TempTroll® On Demand Modulated Heating System – is a quantum leap for patient care.

* TempTroll® is a registered trademark for TempTroll, LLC. The unique patent pending non-toxic chemical self-heating design enables a steady temperature be maintained when activated, ensuring all washcloths reach and maintain the warm to the touch temperature that enables a comfortable washing of the patient and eliminates the worry of the washcloths getting cold while waiting to be used. For more information about TempTroll® Self-Heating technology go to <http://www.temptroll.com>.

Save time and expenses while ensuring health and comfort with Self-Heating **REDI+WASH®**: Total Cleansing System. The Self-Heating **REDI+WASH®** System uses thick, ultra soft cloths to cleanse each part of the body. **REDI+WASH®** is available in resealable 8 cloth and 5 cloth packages to efficiently accommodate infants, children, adults, and applications requiring partial body bathing. These all-in-one packages control cross-contamination while preventing waste of unused materials.

What is the Self-Heating REDI+WASH®: Total Cleansing System?

The Self-Heating REDI+WASH®: Total Cleansing System is a revolutionary replacement for a basin bath. Each resealable pouch contains either 5 or 8 premoistened disposable washcloths for one complete patient's bath.

Can anyone use the Self-Heating REDI+WASH®: Total Cleansing System?

Generally, it can be used on almost anyone. Infants under the age of 4 weeks old have very absorbent skin and will need special care. So it is recommended that traditional bathing methods for infants be used.

Is it safe to use on patients that have delicate skin?

Not only is it safe, but it is advantageous. The disposable washcloths are made of a nonwoven, specially blended mix of Rayon and Polyester. This blend creates a washcloth which is considerably softer on the skin than the traditional terry cloth used in most facilities. Use of the Self-Heating REDI+WASH®: Total Cleansing System helps reduce occurrence of decubitus ulcers.

If the package is resealable, how is contamination controlled?

The cloths of the Self-Heating REDI+WASH®: Total Cleansing System are folded in a unique "Z-fold" which allows the cloths to lie on top of one another in the package but without contaminating each other. The large, oval opening gives a gloved hand easy access to one towel at a time without touching any of the remaining towels.

Are REDI+WASH® Bath Wipes environmentally friendly?

Yes, even though it is a disposable product, the packaging waste has been significantly reduced while still maintaining the ability to retain heat. The Self-Heating System is environmentally friendly. No special disposal is necessary.

Can REDI+WASH® Bath Wipes be used for incontinent care?

The Self-Heating REDI+WASH®: Total Cleansing System has been designed to replace basin baths. It is not designed for incontinent care. REDI+WASH® Bath Wipes are specially design to be excellent cleansers and skin conditioners; however, they are not cost-effective for a patient that is frequently incontinent.

How does the Self-Heating REDI+WASH®: Total Cleansing System save the facility money?

The Self-Heating REDI+WASH®: Total Cleansing System saves the facility up to 70% versus the cost of a basin bath. One unit replaces the cost of a basin, washcloths, soap, water, body lotion, and the cost of laundering. Bathing time is reduced on an average from 25-30 minutes for a basin bath to 8-10 minutes for a REDI+WASH® Bath. This greatly reduces the cost of labor.

Is there anything in the product that could cause an allergic reaction?

There are no known allergens in the product including the packaging, the disposable washcloths or the solution.

Is there any alcohol in the solution?

No, there is absolutely NO alcohol in the solution.

Is there any latex in the product?

No, there is absolutely NO latex at all in any portion of the product or packaging.

Is a moisturizing lotion necessary after using the REDI+WASH® Bath?

The REDI+WASH® Bath Wipe solution contains moisturizers and emollients for the skin including Vitamin E and Aloe Vera. These leave skin feeling soft and smooth so it is not necessary under normal circumstances to need a body lotion after using the REDI+WASH® Bath.

Does the skin need to be towel dried when using REDI+WASH® Bath?

No, towel drying is virtually eliminated. The REDI+WASH® Complete Bathing System solution has been specially formulated to evaporate, leaving skin completely dry in less than one minute. Does the REDI+WASH® Bath Wipe pouch have to be heated to use? No, it is not necessary to heat the REDI+WASH® Bath Wipes to use them. The solution will work just as well if the pouch is not heated.

Because of the eyes, is it safe to use on the face?

Yes, REDI+WASH® Bath can be used on the face. REDI+WASH® Bath Wipe solution is pH buffered to match the skin's normal pH. The solution is buffered by Citric acid which is very safe. The cleansing agent in the REDI+WASH® Bath Wipe solution is the same base used in some baby shampoos and baby body washes and therefore poses no threat of harm to the eyes.

Self-Heating REDI+WASH®: Total Body Cleansing System is the NEW Alternative to Traditional Basin Baths.

The REDI+WASH®: Total Body Cleansing System provides everything needed for full body bathing in one convenient, easy-to-use package. It eliminates the once messy and tedious procedures of traditional basin baths at a fraction of the time and cost! Now, with the addition of Temp Troll's patented Self-Heating technology, The *Self-Heating* REDI+WASH®: Total Body Cleansing System provides the added benefit of heated wipes, without the need for a warming oven or microwave. Temp Troll® technology heats the wipes in the package in 1-2 minutes and keeps them warm for up to 20-30 minutes.

Protected by an antimicrobial preservative, REDI+WASH® dramatically reduces the risk of infection that may occur when washcloths and basins are reused. Patients will appreciate the system's comfort, convenience, and clean scent while caregivers will enjoy the timesaving efficiency and cost savings.

Reduce the Risk of Infection and Irritation

- Eliminates reuse of dirty water and wash basins that can become harbors for bacteria.
- Use individual cloths on each part of the body and simply dispose.
- Antimicrobial preservative protects cloths and prevents infection.
- Safe pH-balanced cleansing solutions includes Vitamin E and Aloe to keep skin moisturized and reduce risk of irritation.

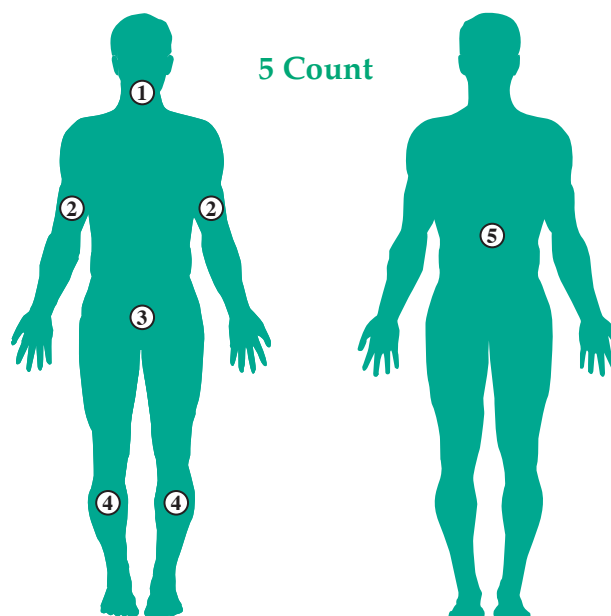

Save Time and Money

- Eliminates the need for warming ovens or microwaves. Packages can be placed where they are needed, at nursing stations, on carts, or in patient rooms, and activated when ready to be used.
- Eliminates repeated return trips to oven or microwave, greatly reducing preparation time.
- Eliminates need for soap, water, linens, basin, and lotion.
- Biodegradable linen-free system eliminates washcloth replacement and laundry costs.
- Dramatically reduces staff time by 50-75% compared to traditional bathing methods.

Maximum Convenience and Patient Satisfaction

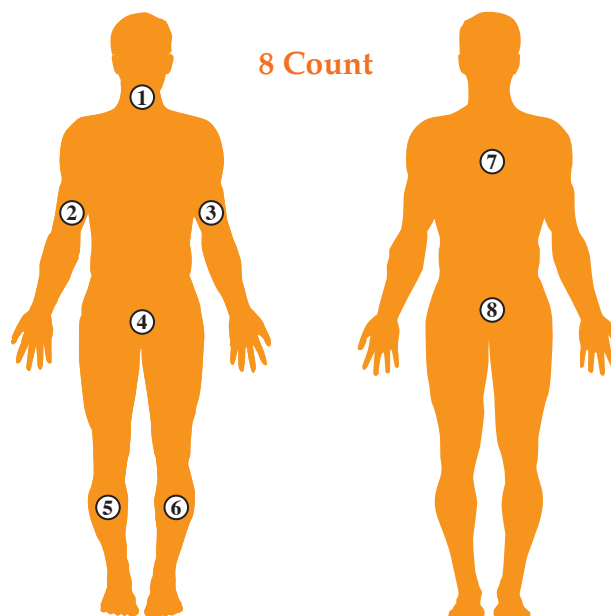

- All-in-one packaging – self-heating – with wide quick-peel opening for fast and easy access.
- Patients appreciate the warm soft touch and clean pleasant smell.
- Provides full body skin assessment.
- Patient's range of motion and flexibility can be tested.
- Provides positive sensory stimulation, comfort and relaxation, and enhances patient's overall well-being.
- Contains the maximum amount of cleansing and moisturizing solution, yet dries very quickly.
- Cloths are Z-folded for easy dispensing.
