

## DBO<sup>2</sup> SAFETYNET

DBO<sup>2</sup> SafetyNet is a software-based service that simplifies the collection, analysis and distribution of worksite safety information. Its simple-to-understand reports allow management to evaluate current leading risk indicators and take action before at-risk behaviors become accidents or incidents. SafetyNet helps customers reduce injuries, worker compensation costs and general liability expenses, thereby improving business performance, and most importantly, sending employees home safely.

## WHO WE SERVE

SafetyNet is transforming business performance today in construction, manufacturing, industrial and insurance companies. SafetyNet meets the needs of companies with multiple worksites, decentralized operations and transient work forces. Our customers **strive for consistency in their safety processes, increased user participation, improved accountability and continuous improvement.**

“SafetyNet has truly changed the loss control environment for those who have taken the next step in site safety. It is the only system I have seen that provides real-time, real-life accountability. Combining SafetyNet with a strong loss prevention program is equivalent to when people began to wear hard hats, steel-toed boots, or began tying off. It will make a significant difference.”

DAVE ALVARADO

SENIOR VICE-PRESIDENT, ABD INSURANCE AND FINANCIAL SERVICES

## HOW SAFETYNET WORKS

After we establish an understanding of your current safety processes and goals, we tailor your SafetyNet program to achieve your desired metrics and performance. For example, SafetyNet meets the needs of companies employing behavior-based safety programs that have pledged to involve employees in their safety processes in order to improve the quality of collected information.

Our patented observation metrics enable customers to benchmark individual observer competencies and assess service provider and worksite risk, providing a more integrated representation of safety risk.

SafetyNet:

- Provides a simple, efficient way to capture observations on a handheld, mobile device such as a PalmPilot or PocketPC.
- Aggregates, analyzes, and communicates observations through easy-to-read reports
- Allows you to benchmark the quality of your observations and performance against peers.

## SAFETYNET BENEFITS

### BREAKTHROUGH SAFETY PERFORMANCE

- Fewer incidents and reduced risk
- Increased individual participation, competency and accountability in safety processes
- Established metrics for continuous process improvement

“DBO<sup>2</sup> SafetyNet has saved us a great deal of investment dollars and has allowed us to accelerate our goals and make us a better company. Evidence of further savings has come through our annual insurance renewal.”

**TOM KADER**  
PRESIDENT / CEO, SEDALCO CONSTRUCTION SERVICES

### ENHANCED FINANCIAL PERFORMANCE

- Improved on-schedule performance
- Minimized profit erosion
- Reduced administration, workers' compensation, health-care and insurance costs
- Cost-effective way to sustain the effectiveness of your behavior-based safety program

### MEANINGFUL OBSERVATIONS = IMPROVED BUSINESS RESULTS

- Insightful business intelligence—both conditions- and behavior-based—that can be immediately acted upon
- Use of leading risk indicators to predict business outcomes and prevent undetected risks
- Elimination of delays in the reporting of information

## THE WORLD'S LARGEST REPOSITORY OF WORKSITE OBSERVATIONS

SafetyNet users collect over one million new observations each month. These observations form the basis for unbiased, independent intelligence that can be leveraged at the individual company and industry levels, to benchmark your safety performance. As companies establish more consistent processes, they continue to increase safety awareness, engage new layers of employees in the safety process and most importantly, protect one another from harm's way.

“For the first time ever, our contractor, insurance carrier and broker were able to collaborate using the same risk information to reduce accidents and injuries. We literally moved from months to minutes in time spent between hazard identification and operational involvement.”

**FRITZ LEITENBERGER**  
RISK ENGINEER, ZURICH NA

**DBO<sup>2</sup> SafetyNet is your partner on the journey to zero incidents and accidents!**
