InfTek's Hosted Kerio MailServer Features

TECHNOLOGY IS INSTINCT

NO ADMINISTRATION

You do not have to be a technical guru to work around Kerio MailServer. InfTek handles all setup and maintanence to save time and lower admin fees. We know Kerio...

DOMAINS

Whether you have just one domain name or several domains, Inftek will manage those domains within Kerio. We will also help manage your domain DNS records for the most reliable mailserver access. This includes adding and removing domains as needed.

SSL CERTIFICATES

If your situation requires that you have an SSL certificate to secure your email, Inftek will assist you in getting the SSL certificate along with implementing the certificate in the Kerio MailServer. InfTek will also help maintain that SSL certificate.

USER ACCOUNTS

The most time consuming aspect of running a mailserver is managing user accounts. With InfTek's fully managed email solution, managing those accounts has never been easier. An assigned administrator within your company will have full capability to add or remove users as changes occur within your organization. If you wish to not deal with any administration, our team will be happy to make those changes as needed.

SPAM & VIRUS FILTERING

Our SPAM repellent helps fight off spam and viruses by delaying replies during the SMTP handshake. Since spam and viruses are very impatient when it comes to outgoing mail, the do not wait around for a target machine to reply. The Kerio MailServer may filter up to 60-70 percent of the spam and viruses without ever receiving the message for analysis.

ARCHIVING & BACKUPS

Inftek will set-up and maintain mail archiving and backup of your organization's email. Backups of your email are very important. If for any reason your email server should go down, InfTek's solid backup recovery will have you up and running again with very minimal downtime. InfTek can backup and archive your Kerio server using Disk2Disk2SAN technology and comply with HIPAA and SOX regulations.

The Kerio MailServer archives all incoming and outgoing messages as they are delivered. Emails are stored in a separate directory so they can not be deleted by the recipient. Archived email can be searched, sorted and viewed in Kerio WebMail or with any IMAP client.

GROUPWARE

More than just email, the groupware features in Kerio MailServer helps groups and individuals work more productively, with features like group calendars, and public folders. With server side storage, and synchronization, email, calendar, and contacts can be accessed from any platform inside or outside the network at any time.
