NDS $1 ERP Addresses Distribution Hot-Button Issues

NDS Systems forges its own path, including in the $1 ERP site license features such as Warehouse Management, Sales Force Automation and CRM, which other ERP vendors typically up-sell as add-on modules.

CLEARWATER, Fla., March 25, 2008 – Though NDS Systems requires only $1 for the ERP Software site license, NDS does not withhold key features. Out-of-the-box, the ERP Solution leverages an all-inclusive feature set to support both "buy, hold, sell" and "sell, source, ship" distribution models. In fact, the Solution is not bound by a box – it has practically limitless configuration and desktop integration possibilities.

Whether a company's revenue is $5 million or $500 million, NDS recognizes that the functionality needs are very much the same. That is why the Solution includes a full suite of component applications, which may be turned on or off by simple configuration. Key among NDS end users are the Warehouse Management, Sales Force Automation and Customer Relationship Management (CRM) applications. The Warehouse Management application includes directed replenishment, directed stocking and directed picking with features such as multiple rules by item, cross-docking, and on-the-fly Product Configuration to handle Assemble-to-Order and kitting needs. Sales Force Automation and CRM give the company's Sales Management and Sales Team elevated visibility and absolute control from sales lead to resulting sale.

Other distributor-focused component applications available in the NDS suite include:
- Sales Order Management
- Purchasing Management
- Supplier Management
- Financial Management

- Service Warranty
- Dynamic Product Configurator

The NDS $1 ERP System unifies all these component applications, giving all users in an organization a single point of reference.

Joe Allmond, MIS Director of Reid Entities, said, "The multi-enterprise capabilities of NDS ERP applications allow us to manage all our distribution and manufacturing operations in a single system both financially and operationally. The NDS cross-docking feature has enabled our distribution company, Reid Supply, to successfully employ the 'sell, source, ship' model. Notable is the significant increase in material, which is cross-docked from receiving to shipping, eliminating a large number of inventory touches."

About NDS Systems

Since its inception in 1985, NDS Systems – the "One-Dollar ERP Company" – has committed itself to offering a comprehensive suite of world-class manufacturing, distribution, service and financial software. Recognizing in 1998 that the Internet changes everything and that companies would trend toward an e-business model, the company re-engineered its entire Enterprise Resource Planning (ERP) software to a multi-tier architecture with totally integrated business logic that provides a Web-based business system for the real-time, online enterprise. The NDS enterprise customer base spans the manufacturing, distribution and service sectors, with revenues of $5 million to $500 million.
