

# **Supply Chain Performance and Spend Analytics**

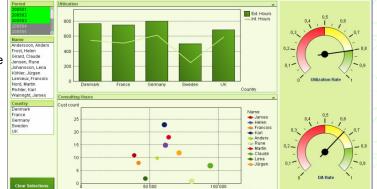

It is common knowledge that in our competitive business landscape, the company that has the most effective Supply Chain Solution in place, wins in the long run. Supply Spend Analytics is a major component of this solution and helps with the objective of acquiring the best supplies at the lowest cost. If all the elements of the Supply Chain Solution are in place you can be assured that you are providing your customer a quality product and service at the most competitive prices.

Our solution will enable users to analyze corporate-wide spend, from any dimension and drill-down to any level of granularity.

With our Spend Analytics solution in place, you can:

- Create effective sourcing practices
- Establish the process to strengthen your supply chain
- Advance market penetration
- Augment community commitment
- Deploy Process Quality and Control
- Accelerate Supplier Diversity Participation through Industry Collaboration
- Effectively answer questions as: What is your spend across supplier risk, parent-child linkage and diversity characteristics — off and oncontract?
- Realize increased visibility for tracking progress against goals on targeted sourcing efforts

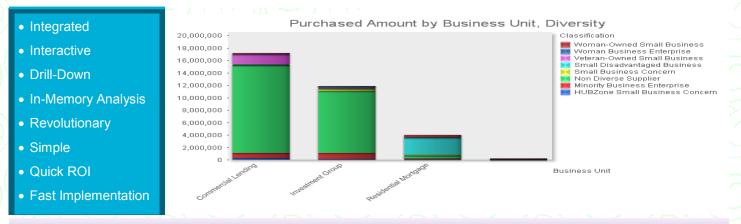

Spend data typically generated in processes like Purchase Requisition, Purchase Orders or Catalogs and Invoicing is often fragmented and inconsistent, and lacks a common coding structure. Aggregation of such data, standardizing its schema, and enriching it with structured attributes, can be easily enabled by using our cutting-edge solution.

#### **Key Features and Benefits**

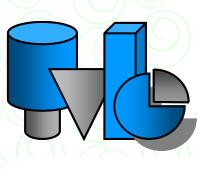

#### **Data Integration**

- Integrates with existing corporate financial, procurement and other operational systems. We consolidate, clean, and enrich disparate spend data from all transactional systems throughout your organization into an integrated database
- Perform continuous spend analysis with frequent data updates instead of a one-time exercise. One-time upfront integration with ERP systems makes the process simple and easily repeatable. We setup the ongoing data uploads at a predefined frequency (including intra-day) to ensure availability of current data and historical comparisons.
- Whether you have a single integrated data warehouse or spend data scattered across dozens of systems, we can help you achieve visibility across all your spend.
- We can aggregate spend data from numerous systems, including SAP, Oracle, Movex, JDEdwards, Ariba and others.

# **Supply Chain Performance and Spend Analytics**

#### Key Features and Benefits

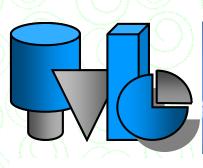

# Track goals and performance using role-specific and region/ business unit specific dashboards

- Specify and track goals against commodities, diversity categories, and business units. Monitor spend against goals on a dashboard and ensure policy compliance.
- Enable an executive and managerial dashboard to drive procurement and operational decisions
- Tracking of compliance of negotiated agreements through preferred suppliers

- Drilldown to display sub-units, regions and all transaction detail that comprises summarized spend figures
- Eliminate maverick spend by enhanced monitoring of employee spending.
- Track diversity spend against goals by unit, ethnicity, commodity and customer-specific compliance plans and goals.
- Perform Tier 2 spend analysis including tracking of subcontracting plans and goals.

- Quick ROI
- Fast Implementation
- Report your high risk suppliers as part of Sarbanes-Oxley compliance and check involvement in any fraudulent activities or linkage to terrorist organizations as required by the Patriot Act.

## Supply Chain Performance and Spend Analytics

#### Key Features and Benefits

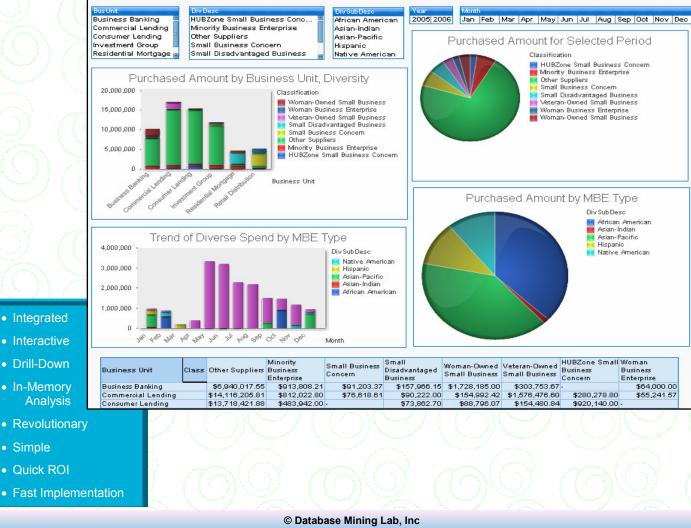

#### Analysis-on the fly, in-memory

- Once we transform, clean, enrich and integrate spend data-we can add dimensions and metrics on the fly. There is no need to pre-aggregate information and most charts can directly handle aggregations. If transaction volume is very high, we can pre-aggregate information into our data mart.
- We pre-build the initial set of charts and reports you need, and since the interface is extremely easy to use, with minimal training most users are able to add dimensions, metrics and charts on the fly.

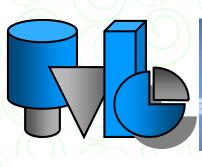

Our sample screenshots below provide some idea of the capabilities of our solution

#### **Diversity Spend Analysis**

#### What-If Analysis and alerts to your PDA

Jan-04

n

•

Perform what-if analysis and simulations with ease. In addition to reporting, our solution also allows you to input key data into the application and use it in the metrics calculations.

Mar-04

Feb-04

- Web-based reports enable managers to view spending details, analyze procurement data, measure performance, and develop strategies for increased savings.
- Key stakeholders can be automatically notified via email or PDA alerts when out-of-tolerance levels compared to targets are reached.
