Today´s IT users´ requirements are increasing constantly. For this reason, most enterprises dedicated to line of business software need to consider the ability to present information and documents in the format and quality desired as one of their top priorities.

Therefore, the modern organization's document management and presentation is a constant challenge:

- document volume and variety are ever increasing.
- addressees cannot wait.
- means of document access are changing rapidly .
- quality presentation becomes a high priority.
- demand increases for automatic capture of incoming documents and information.

Besides these factors, there are great opportunities to enhance the effectiveness of the communication processes, reducing their inherent costs.

Today's variety of options for information transmission support complimenting existing traditional printed documentation as well as substituting them completely with other means of communication, such as web communication, email, electronic documentation, etc. Professional, agile and customized management converts business documents not only in effective corporate image platforms, but also in powerful mass communication tools with an important individual impact.

Responding adequately to the requirements that an efficient management system of the documentation process requires a flexible solution capable of adjusting to different production environments. Additionally, the solution must be powerful enough to generate high-quality personalized documents of traditional print media as well as electronic media and be sufficiently flexible for distribution conforming to each recipient's preference. Today's documentation requirements include:

- Personalized Documentation.
  - contracts.
  - proposals and vouchers.
  - integrated extracts.
  - receipts.
  - invoices.
  - duplicate notes of purchase.
  - payrolls.
  - medical records.
  - payment Documents.
  - tickets and certificates.
  - marketing Messages.
    - corporate reports.
    - BOOKS.
- electronic/Print Support.
- high Quality Presentation.
- fast processing.
- incoming document capture.
  - delivery notes.
  - invoices.

DocPath
a step ahead in document software

The Company

DocPath specializes in providing package software designed to address every documentation requirement which enables users to easily improve existing presentations or design new presentations or to improve efficiency and automate delivery and archiving business documents, giving the user full control of any phase of the document life cycle.

Since 1992, the company has been delivering document based solutions globally. The superior software quality and seamless integration with existing applications has been proven in more than 50,000 installations of our document server software.

One of the long-term DocPath challenges is to create a world wide web of business partners. After all, the role its partners play is vital, not only in its customers' success, but in its own success as well. Our highly qualified partners can meet the critical systems, implementation, software integration and platform deployment needs of all our customers world wide.

DocPath USA provides a scalable product suite and complete range of training, implementation and support services that meet the value requirements of any businesses size.

Technological support

DocPath offers a full range of services necessary to guarantee a successful implementation of its products, including specialized training and workshops. It has the experience, knowledge and resources required to be a qualified technology partner in the development of custom solution projects of any scale.

The Company also offers specialized services for significantly accelerating migration of formerly used Document Management solutions.

The **DocPath**® family of Products and Solutions covers the entire document cycle and can be used to provide a complete solution or to solve a part of the document process.

A great number of companies and organizations ranging from small and medium up to the largest world wide enterprises use **DocPath**® around the world because of its powerful processing capabilities and the high and easy connectivity and integration provided.

Different solutions are available, from large corporate solutions requiring premium services such as generating documents on demand in real time while addressing high-volume simultaneous requests to individual user solutions requiring limited functionality such as printing only.

main advantages

DocPath® Solutions are:

- Integral Solutions.
- Flexible:
    - Data entry treatment.
    - User's Process Flow configurability.
    - Output data.
- Operate in centralized and/or distributed environment.
- Multiplatform.
- Totally integrable.
- Secure.
- Offer organizations the possibility of having one design product that will meet all their information needs no matter how complex.
- Permit web document design and processing as well as printing, emailing, faxing, archiving, retrieving and automatic distribution.
- Efficient and fast incoming document capture, document management, archiving, retrieving, etc.
- Provide enhancement of final results, generating high quality document presentations.
- Add value to the existing information infraestructure.
- Provide significant savings.
- Permit migration from a centralized structure to a non-centralized structure or viceversa.
- Offer best market price/gain ratio.
- support digital signature of electronic documents.

Design, generation, printing, archiving and retrieval, electronic distribution, digitalization ...
