

PRESS RELEASE

Certified Aviation Services receives EASA Approval

Ontario, California June 2008 – Certified Aviation Services is pleased to announce that they have successfully completed auditing and received approval as an EASA Part 145 Certificate holder for their Line Maintenance solutions in Los Angeles with other stations pending. CAS is the first third-party line maintenance vendor with EASA approval at Los Angeles International Airport.

EASA (European Aviation Safety Agency) promotes the highest common standards of safety and environmental protection in civil aviation in Europe and worldwide with over 30 countries in management. Having the EASA Certificate ensures that all European Commercial Carriers who leverage Certified Aviation Services while in the United States will maintain the same safety and maintenance levels as in Europe, as well as all FAA Maintenance regulations required for flying within the United States under CAS' 145 Repair Station License.

“With more and more European carriers flying to U.S. destinations, it’s great to be able to offer them the reassurance and security that our maintenance services meet and surpass the high standards of EASA.”

- John Landherr, Chief Operations Officer
