

FOR IMMEDIATE RELEASE

eDynaQuote Launches New Graphing Feature with Dynamic Functionality

eDynaQuote recently updated their proprietary e-sourcing software with new dynamic graphing features. The enhanced graphing technology will provide their customers with additional reporting tools and real-time monitoring in a graphical format. These graphs were designed to enrich the customer experience with a visual representation of bidding activity that will complement the current line item results.

"Online bid events are exciting to watch. These new graphs bring a striking visual representation of the live competitive bid activity and the resultant savings in real time," said Bret Grady, eDynaQuote's CEO. "The new graphs retain the hallmarks of eDynaQuote - easy-to-use yet powerful tools that deliver bottom-line savings for clients."

A few of the features the new graphs will be able to display are an instant look at the overall savings, the live bid stream as it relates to time, cost-compression on the line items and by suppliers, and the ability to download and save all graphs for future presentations.

The really good news for existing customers is that these graphs will work smoothly with any bid event that was held in the past. This will be a tremendous benefit as contracts come up for bid again, the customers will be able to refer to the details and present them in a much more professional manner.

eDynaQuote™ offers powerful, on-demand solutions that help clients streamline their purchasing process to reduce costs and make better supplier selection decisions. eDynaQuote offers a state-of-the-art e-sourcing system, professional Purchasing expertise, and bid management services.
