## INM eLibrary

### Corporate eLibrary Quick Start Package

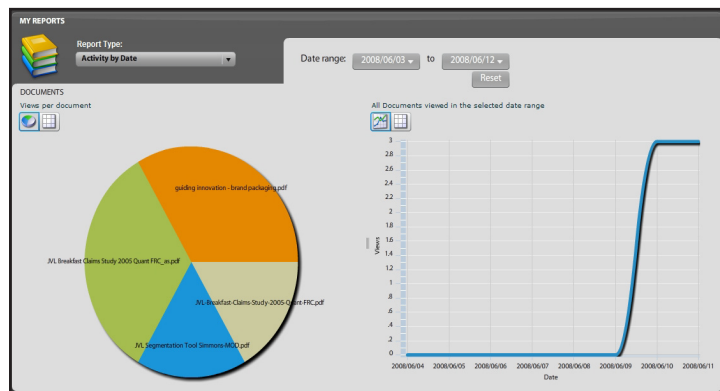

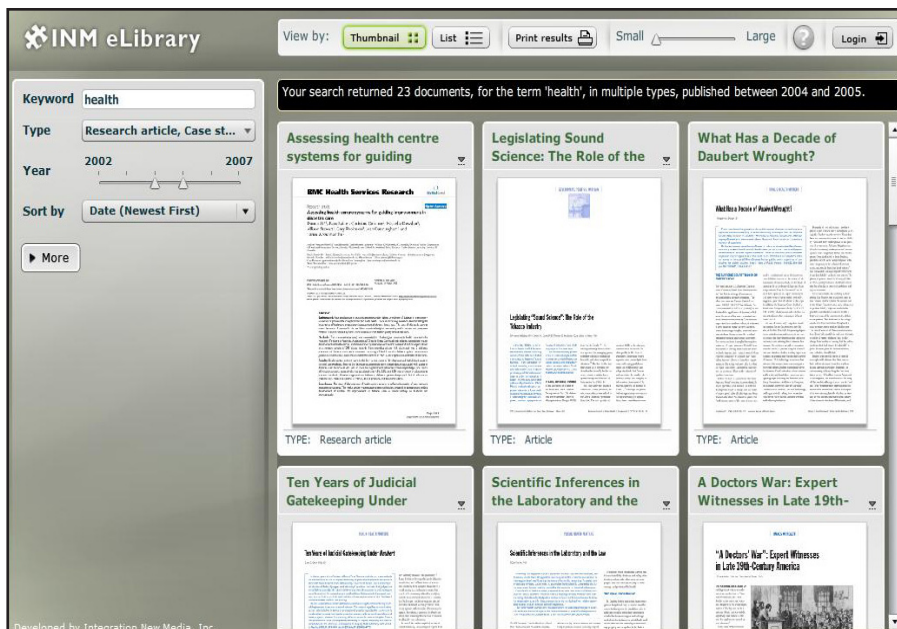

The INM *Corporate eLibrary Quick Start Package* is designed to meet the needs of corporate librarians looking to bring volumes of content online to create a digital library. Based on INM's popular eLibrary technology, the *Corporate eLibrary Quick Start Package* contains all of the licenses and components for creating a rich, web-based library from the documents you have today, without undergoing time-consuming and costly conversion exercises.

The *Corporate eLibrary Quick Start Package* was created with the needs of the corporate library in mind. The front-end of the application provides end-users with a rich, web-based interface for searching content and viewing

documents directly within the web browser. Users can enter a keyword or choose from set search fields to find documents of interest and can then progressively narrow down results. Search results can be viewed in either a list or thumbnail view, and documents can be pulled-up immediately on-screen.

A back-end Control Center provides librarians or administrators with the ability to manage users, including setting passwords and adjusting access permissions. Administrators can also manage content from this module, including adding new documents, adjusting categorizations, replacing existing documents, and more.

A powerful reporting module is also included to track eLibrary usage trends, to see which content is accessed the most and to view which users are the most active.

INM eLibrary provides corporate librarians with the ability to repurpose existing documents as-is, without the hassles of converting to HTML or other formats. The solution leverages PDF files, an ISO-standard format, which allows organizations to take advantage of the tools and processes they already have in place.

## INM eLibrary

### Corporate eLibrary Quick Start Package

The key benefits of INM eLibrary include:

- **Superior search capabilities** – Search by keyword, category, text string, Boolean search, or multiple values. Searches can be saved and reloaded for repeat queries.
- **Quick deployment time** – By leveraging a pre-packaged solution built on proven technology you can get your library up and running faster and reduce overall deployment costs.
- **Customizable interface** – The user experience can be tailored to occasional users and power users.
- **Cross-platform access** – Users can access content from a variety of locations and systems.

The *Corporate eLibrary Quick Start Package* includes:

- A customized version of INM eLibrary branded with the organization's logo and colors
- Custom search fields
- Dedicated server hosting
- All relevant product licenses
- First-year maintenance and support

Optional features are also available for organizations looking to add support for rich media files, on-the-fly PDF creation, advanced file management capabilities, and more.

## About INM

Integration New Media, Inc. (INM) helps companies create rich user experiences in both online and offline environments. With projects ranging from Rich Internet Applications (RIAs) through to interactive sales and marketing tools and searchable libraries, INM has developed solutions for organizations large and small in a variety of different industries.
