

Keeping track of the time your employees spend on the projects has never been easier. Offering an interface similar to iCal, every Mac user feels familiar with Time Tracker. Let your employees do the data entry for you with this cocoa-based application that gives your employees the ability to track time quickly and submit information about the progress of their assigned tasks.

The screenshot shows the Time Tracker application window. At the top, there are navigation buttons: Stop Watch, Weekly Sheet, Daily Sheet, Task Slip, and Submit. On the right, there are Sync and Settings buttons. The main area is a calendar for January 2008. On the left, there is a sidebar with a 'PROJECTS' list: Unassigned Task, All Projects, Boardroom, Remodeling (highlighted), Bathroom, and Renovation. Below the projects list is a monthly calendar navigation for January, February, March, and April 2008. The main calendar grid shows dates from 1 to 31. On January 8th, several tasks are listed: 06:36 PM Unassi, 06:35 PM Carper, 03:33 PM Carper, 10:48 AM Framir, 11:07 AM Plumb, 12:52 PM Unassi, and 04:09 PM Carper. A popup window titled 'Framing' is open over the 9th of the month. The popup contains the following information: project Bathroom, duration 2 hours 0 mins, date 01/09/08 10:48, rate/hour 45.00, revenue 90.00, cost/hour 5.00, cost 10.00, and a note: 'Lot of framing was achived in this task'. A 'Done' button is at the bottom right of the popup.

Time Tracker comes with a Stop Watch Interface which gets added to the Status Menu when the computer is started. The Status menu lets your employees access the Stop Watch menu from within any application. Starting the Stop Watch is just one click away. While the Stop Watch is running, the elapsed time is shown in the menu.

Employees can view all the tasks logged so far in a calendar view in month, weekly and daily views. They can choose to see the tasks for a particular project, for all projects, or the tasks that are not yet tracked for any project.

Employees tired of filing their weekly or monthly Timesheets? With Time Tracker employees can click on the synchronize button available on the Time Tracker toolbar. All the time entries that are not yet submitted will be sent to the PowerEasy Time and Billing Server. The project manager can then review all the times entries and include for customer billing. As easy as that!

## About Effigent, Inc.

Effigent, Inc. (a California Corporation) is a software company with its principal offices in San Jose, California. We specialize in delivering powerful, easy-to-use, enterprise-class applications by leveraging Apple Technologies and Open Source software.
