## **JavelinNCIC**

## **Product Overview**

Making Connections for Life.

A simple yet powerful user interface, InterAct JavelinNCIC allows users to query a national, state and local index of criminal justice information—including criminal record history, fugitive data, stolen property, missing persons data and more. This stand-alone product fully supports CJIS and lets dispatchers as well as officers in the field easily run queries and validate information in real time. JavelinNCIC is also integrated directly into InterAct CAD for the ultimate ease of use by eliminating the need for a separate workstation and dual entry of data.

## **System Features**

JavelinNCIC provides an arsenal of easy-to-use features that can be customized for agencies of any size. Key features offered by the interface include:

- Functioning as a stand-alone module that can be installed on desktop or laptop PCs and accessed wirelessly from mobile units.
- Two-way flow of information\*. Users can query and also write, create, modify and delete information as needed. Robust security features ensure that only authorized personnel can make changes to the data.
- > Visual notification of responses to transactions.
- Capture of the information that is most important to law enforcement agencies, such as stolen vehicles, concealed weapon permits, missing persons, warrants and criminal history.

## **System Benefits**

- > Easy to Use JavelinNCIC's simplicity allows novices and experts alike to easily perform the most complex transactions. Colorcoding ensures that required information is included in an entry or query, and Help tools are built into the interface.
- > Enhanced Security The JavelinNCIC client includes security measures such as user-permissions, ORI-permissions, and required user-entry fields. It can even be configured to handle the state requirements for logging on and off the state network, as well as any other security requirements mandated by the state.
- > **Save Time** The database permanently stores all system-wide transactions and allows past transactions to be viewed at any time, enabling quick and easy resubmission of data.
- > Transaction Return Notifications Agencies can configure the interface to visually notify a user that a transaction response has been returned. The user can view both the return and the number of returns that are still outstanding and then easily print the return.
- Save Money Since JavelinNCIC runs independent of any other programs, customers receive maximum benefit without the high cost involved in purchasing additional hardware, software or VPN licenses.

**SYSTEM REQUIREMENT:** Each agency is responsible for contacting the state and ensuring all required paperwork, hardware, third-party software, and configuration (to include network, ORI, NCIC Usernames/Password, and terminal ID assignments) are in place prior to JavelinNCIC installation. For agencies in Georgia this includes a request for a Metro Header.

\*The InterAct JavelinNCIC interface, and particularly the two-way interace, may not be available in all states. Please contact a sales representative for more details. In the event that we do not yet support your state's access to the database, we are pleased to work closely with you to develop a solution to meet your needs.
