POWERONE INTRODUCES AIRPOWERED WIRELESS INTERNET

ORLANDO, FL – The Orlando area will soon enjoy unprecedented Internet speed and reliability with the new airPowered wireless network, a fixed-base wireless solution designed to provide small and medium-sized businesses with advanced broadband connectivity. The airPowered network uses The Canopy™, high-speed technology from wireless communications leader Motorola, which was originally developed for the military. By the end of 2008, airPowered Access Point units will be mounted and operational on 17 towers throughout Central Florida.

airPowered uses the air, or Internet Access Space, by employing a point-to-multipoint canopy. Customers no longer have to compete with other customers to upload or download their data and graphics through congested cable and phone lines. With airPowered, each customer enjoys direct, fast connectivity to the closest tower and then directly to the Internet. Built-in system redundancy ensures the fastest, unobstructed speeds.

“In today’s digital environment, customers have become dependent on their Internet connection, relying on it more and more every day,” said Jim V. Beyer, president and CEO of airPowered, LLC. “airPowered provides the speed customers need at a fraction of the cost of traditional T-1 lines.”

Through the quick, simple installation of a small Subscriber Module on a building’s outside wall or roof, customers access upload and download speeds as fast as or faster than virtually every other service available today. airPowered offers enhanced security using proprietary FM modulation, plus Data Encryption Standard (DES) or Advanced Encryption Standard (AES).

Wireless broadband is quickly becoming one of the world's preferred technologies for delivering advanced and in-demand high-speed internet access, IP-based voice, video, and data applications. The Canopy™ is deployed in more than 120 countries worldwide and has been stringently tested for tolerance in terms of temperature, precipitation, lightening strikes, and other weather and environmental elements.

airPowered, LLC, is a member of the PowerOne family of companies, which has provided integrated communications and technology solutions to business and residential customers throughout Central Florida for more than 25 years. The company's newest product, airPowered, offers customers access to secure, high-speed advanced Internet services over a reliable wireless network. For more information, visit www.power1.com.
