Scalable, web-based MOBILEFusion™ Asset Tracking Logistics platform improves supply chain business decisions - wirelessly by utilizing the latest in satellite, CDMA, GPRS, RFID, RTLS, LBS, mapping, sensors and network

- **MOBILEFusion™** Carrier grade Platform
- **MOBILEYard™** Yard and Parking Management
- **MOBILEField Service**

MOBILEForm™
Link to ERP over the air

Compatible with
Workabout Pro

Modular in design, MOBILEFusion provides flexible deployments where data can be easily configured to pass information into auto-fill mobile forms, scheduling, maintenance or dispatch applications, to integrate with ERP applications or generate automated reports that summarize daily, weekly or monthly activities. Our supply chain and logistics applications to track inventory or assets use MOBILEFusion with GPS, RFID, RTLS or LBS hardware depending on your need.

The platform is flexible enough to add additional support for Yard Management, supporting your warehouse inventory locating outdoors to the bounded yard or integrating wide area inventory control and end to end supply chain visibility.
