

Solution Brief

Simply Continuous: Data Protect Vault

Key Benefits

Offsite Disaster Recovery

- > Immediate and cost-efficient disaster recovery
- > Eliminate operational tape backup
- > Remote site replication
- > Continuous recovery verification
- > Continuous online data backup and protection
- > On-demand recovery and equipment replacement

Easy Integration

- > Supports all Data Domain Appliance Series models
- > Utilizes existing network bandwidth

Operational Simplicity

- > Fully-managed service
- > Low administrative costs
- > Easy testing and reporting capabilities
- > Reduced hardware footprint

Lower Costs

- > Zero capital outlay
- > Restore to existing or alternate site

Backup to Tape? Finally, a Better Way

Are you getting all you need from your data protection efforts? If you're like most businesses, your options have been limited to tape backup. Tedious and time consuming, tape is prone to errors and offers little hope of fast and accurate data recovery in times of an emergency. With Simply Continuous Data Protect Vault, your information will be deduplicated by Data Domain's industry leading appliances, replicated, and stored at a secure Simply Continuous datacenter, where it will be readily available whenever and wherever you need it.

Data Protect Vault is a hosted service that protects and recovers business critical data during unforeseen events such as power outages, facility problems and natural disasters. As customers store data on their Data Domain appliances, that exact data is securely transmitted to the Simply Continuous datacenter – automatically.

Recover At Any Time, Any Location

For any incident at your site that renders the Data Domain appliance inoperable, Simply Continuous will ship out a recovery unit that is loaded with your data and operating environment. Upon arrival, install it, plug it in, and you are back up and running, with no loss of data. When you activate the replacement appliance, Data Protect Vault immediately resumes protecting your data without interruption.

Operational Simplicity, Complete Reliability

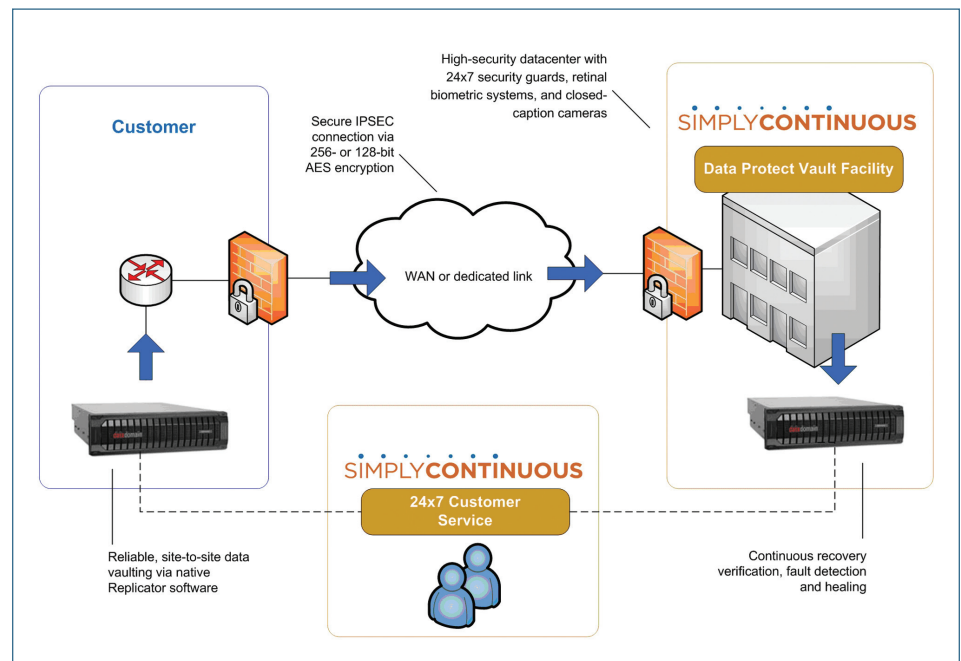

With Data Protect Vault, your backup data is securely replicated offsite with no tapes, software, or equipment to manage. Simply Continuous continually tests data

SIMPLYCONTINUOUS

integrity and recoverability and provides you access to up to date performance and status reports through our Data Protect Vault customer portal.

Less Bandwidth, Lower Costs

Data Domain deduplication and replication technologies significantly reduce the volume of data sent to remote locations by deduplicating and compressing the data locally, then vaulting only new and unique data segments in compressed format. This enables an average data reduction of 10-30x and can cut the bandwidth needed for replication by 99%, making network based disaster recovery economically and operationally feasible.

Secure Facilities

Simply Continuous' datacenter offers state of the art security, fire safety and redundancy to protect your data. We offer:

- Biometric security
- High-quality Tier 1 Internet bandwidth with multiple network fiber entrances
- Uninterruptible power and cooling with N+1 Caterpillar backup generators
- A location where natural disasters are unknown

In Times of an Emergency

In the event of a disaster (or a scheduled test), contact Simply Continuous by phone, email or through the customer portal. Simply Continuous will verify the request with your designated contact and begin replicating the most recent data and operating environment to a recovery appliance that is shipped to your designated recovery site immediately. On its arrival, you plug in the appliance and pick up where you left off. Vaulting protection resumes and you will always have a copy of your data in our center.

How to Purchase

Data Protect Vault is available on a subscription basis and can be purchased through your Data Domain Authorized Channel Partner or Simply Continuous account executive.
