SolidSpace, LLC Launches Server Health Check

An indispensable uptime and performance monitoring tool that provides systems administrators vital knowledge for maintaining healthy URL devices and networks.

Winston-Salem, NC (PRWEB) September 23, 2008- SolidSpace, LLC, a provider of IT hosting and network solutions, launched today Server Health Check, a remote availability and performance monitoring service for any internet connected device or network. Aimed at reducing costly outages by keeping systems administrators aware of patch levels, virus definitions and utilization levels, this new addition to SolidSpace's Managed Services offering is an affordable and powerful tool for any business' IT strategy.

SolidSpace's Server Health Check delivers weekly reports assisting business owners and system administrators in:

Reducing Lengthy Outages

- Weekly reports identify missed patches and virus definitions plus indicate potential hardware issues
- Service failures are noticed within seconds, sending alerts via email or email capable device, helping identify technical issues quickly

Decrease Yearly IT Service Costs

- Supplies busy system administrators vital performance knowledge, allowing them to efficiently plan preventive maintenance strategies for a wide range of operating systems.
- Gain expert guidance from SolidSpace's technical team at a discounted rate, offering a wide knowledge base in network design, migration, and operating system and application maintenance

-More-

“Server Health Check is another example of how SolidSpace is dedicated to offering small to mid-size businesses remote operating system monitoring tools that reduce yearly IT costs associated with preventable downtime,” stated Todd Hunter, SolidSpace’s VP of Technology. “Server Health Check’s reports are designed to alert system administrator of troublesome issues before they cause failures, allowing businesses the freedom of proactively addressing IT issues instead of being trapped in a break fix cycle..
