

# A complete website solution. One online platform.

website builder + content management + analytics + seo + managed hosting

“ Sitemasher looks like a great system and something a lot of our customers could use. I found Sitemasher to be a very advanced tool with one of the easiest user interfaces I have seen yet. ”

Alan Porszt  
www.host.ca

Sitemasher provides a fully managed, hosted website solution that seamlessly integrates the website building and publishing environment, content management system (CMS), analytics and search engine optimization (SEO)...all within a single platform.

## Website Builder

Build customized, interactive websites in a collaborative environment without programming and complex implementation.

## Content Management

Update content with our built-in CMS, which puts control in the hands of the content owner and saves time and money traditionally spent on CMS integration.

## Analytics

Analyze traffic from your desktop or your mobile device using our integrated analytics features to improve the volume and quality of traffic to your website.

## Search Engine Optimization

Optimize your site for search engines right within Sitemasher's search-engine-friendly platform.

## Managed Hosting

Sitemasher manages the security, hosting, and infrastructure requirements of your website, freeing you to focus on your business.

## Sitemasher \$

Sitemasher is a single platform for the entire lifecycle of a website.

## Traditional \$\$\$\$\$

Traditional sites need customized everything! Website implementation requires complex coding and integration with disparate systems.

## Stop worrying about hosting, security, storage, backup, and bandwidth. Focus on business results.

We deliver our solution to you over the Internet using a tier one, first-class hosting center, with a totally secure, scalable application and system architecture.

**Scalability.** If traffic to your site gets heavy, our hosting platform will automatically distribute the load across multiple servers within the managed cloud. Individual web servers can be added as system capacity increases and individual site requests are automatically funneled to specific web servers via server load balancing.

**Security.** Sitemasher manages, monitors, and maintains security on the web servers. Patches, updates, and antivirus are all taken care of to protect against trojans, viruses, worms, spam, spyware, and other malware. Sitemasher is built to prevent SQL injections, cross-site scripting, malformed URLs, denial-of-service attacks, and so on.

**Redundancy and Availability.** All of the components within each of our data centers are redundant – computers, databases, servers, and routers – so there's no single point of failure. Equipment is powered by UPS with backup generators. In addition, all websites are automatically replicated to all servers within each data center.
