eCONTINGENCY™

The Face of Business Change!

EVE™ eContingency™: A SELF-SERVICE, WEB-BASED, REAL-TIME EMERGENCY MANAGEMENT AND COMMUNICATIONS SYSTEM.
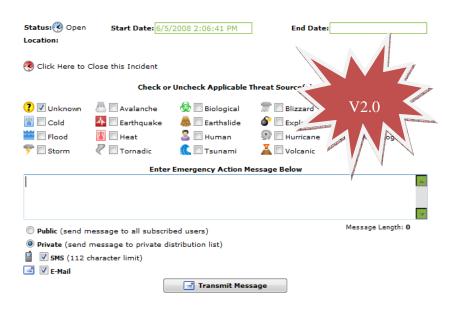

By X-tier SAE

"*Threats come in all types and sizes: from avalanches, biohazards, earthquakes, hurricanes, floods, and tsunamis, to tornadic, volcanic, terroristic, and more. Unfortunately these are a part of everyday life. Increasingly, that which used to be unthinkable and unimaginable is more commonplace.*"

To ignore the potentiality of a worst case scenario is to heighten the probability of impact expansion if the unimaginable becomes reality. Enter **EVE™ eContingency™**. **EVE™ eContingency™** can help reduce organization liability and provide the potential ability to reduce the loss of life and property in the event of an emergency.

EVE™ eContingency™ Emergency Communications Console

EVE™ eContingency™ User Features

- Ability to access near real-time emergency information via Internet through EVE™ eContingency Emergency Web Pages
- Ability to receive near real-time emergency information via single or multiple email accounts
- Ability to receive near real-time emergency information via any SMS (text messaging) supported mobile device
- Ability to send information via the Web through EVE™ eContingency's send mail feature

EVE™ eContingency™ Management Features

- Ability to post up-to-date emergency management information as Web content
- Ability to use the Department of Homeland Security Threat Level Policy or define a custom (local) Threat/Emergency Level Policy
- Ability to increase/decrease threat levels
- Ability to communicate public or private emergency information to selected individuals and or groups
- Ability to manage multiple incidents with one or more Emergency Managers
- Ability to define specific types of threats
- Ability to catalog facility safety and hazard information
- Ability to electronically post emergency plans, checklists, procedures, and guides
- Ability to schedule and publish emergency training
- Ability to integrate 3rd party RSS emergency feeds
- ...much, much more!

"*EVE™ eContingency™ can be used by any organization to provide Emergency Management personnel with the necessary tools to mass communicate instructions in near real-time to first responders, employees, students, parents, customers and more; store and catalog facility safety and hazard information; provide access to emergency plans, procedures and checklists; schedule and publish training, store and message emergency contacts and much more!*

EVE ™ eContingency™ allows the management of multiple emergencies via one or many Emergency Managers through a centralized portal. The system uses a role-based authentication and authorization security architecture to include integration of X-tier's Intercept™, a Web hardened operational security engine."

What is EVE™? EVE™ is a Web-based, adaptive and sophisticated modular software system composed of many applications. These applications or "modulets" are divided into categories based on the areas of an organization they support; i.e. *Marketing/Sales Management*, *Product Management*, *Customer Management*, *Service Management*, *Resource Management*, *Supplier/Partner Management* and *Enterprise Manag*ement. Additionally, within these categories are activity areas and some of these areas are also mapped as customer focused disciplines for delivering a product and or service; i.e. *Operational Support* and *Readiness*, *Fulfillment*, *Assurance*, and *Billing*.

What is EVE™ eContingency™? "We designed the system for just about any organization that has a need to get the word out fast," says Damon Kuntz, X-tier's CTO. "From elementary schools to colleges, eContingency™ puts faculty, staff, students, parents, and first responders in the communications loop; doing so in near real-time, depending on how the organization wishes to manage the emergency. However, EVE™ eContingency™ *is not limited just to schools*," Kuntz adds. "Federal, state, and city governments as well as any business or club can use the system to send public or private emergency information to anyone.

"Real-world examples would be skiers on a slope getting avalanche condition alerts in real-time; a company immediately reporting a chemical spill to local and federal agencies; evacuation instructions go out as a fires or floods threaten communities - all can be managed by the system simultaneously as communications are sent to mobile phones, email, and via the organizations Web pages housed on the EVE™ eContingency™.

"This system gives the people using it the potential to save lives and property and has the potential to reduce an organization's risk of liability for failing to do so."

EVE™ eContingency™ *can be used by any organization* to provide Emergency Management personnel with the tools necessary to communicate instructions in the event of multiple emergency situations. The system also boasts X-tier Countercepts division's integrated security engine called EVE™ Intercept™ which monitors and institutes security actions automatically to protect privacy and data.

The service starts at $1250.00 a month or $15,000 annually.

About X-tier

Founded in July of 2000, X-tier SAE INC. ("X-TIER") is reshaping an industry that has traditionally ignored small and midmarket organizations. X-tier is a privately held technology products and services firm located in the greater Kansas City Kansas/Missouri Metropolitan area whose certified Systems Architects and Engineers design, construct, implement and integrate custom Web-based technologies for small and medium-sized organizations.

In 2007 X-tier's Systems Architects and Engineers created the company's Countercepts division. Countercepts provides, from the ground up, security hardened solutions; including EVE™ Intercept™ integration in all company software engineering efforts. EVE™ Intercept™ is an integral part of the EVE™ Security Architecture and has proven a robust, intelligent, and hardened data/application countermeasures module eight years running.

At X-tier, security is always priority one.
