SM Ceelox SecureMail™

Software Benefits:

- Meet regulatory compliance
- Simple, powerful email encryption
- Microsoft Outlook plug-in
- Desktop-to-desktop encryption solution

Email Encryption made Simple.

Data breaches are in the news everyday. Did you know that unsecured emails can be intercepted while in transit? Ceelox SecureMail provides an end to end solution by encrypting the messages directly on the sender's computer and decrypting on the recipient's computer. No more Personally Identifiable Information floating around the company server before encryption. No access to the data without our industry exclusive "biometric digital signature". Safe and secure at all times.

Ceelox™

Introducing: Ceelox SecureMail
Email Encryption made Simple.

Why Ceelox SecureMail

Unprotected, email is not a secure form of communication. It may be copied or intercepted at any number of points, such as your desktop or the recipients', or the numerous servers that the email traverses during transmission. Ceelox SecureMail provides an easy-to-use, easy-to-deploy email encryption solution for inbound and outbound email communication. Ceelox SecureMail protects financial information, social security numbers, credit card numbers, account numbers, balance transfer information, salary and compensation data and any other sensitive or confidential data. You would not communicate confidential information on a postcard that everyone could read. Why would you do that with your email communication? If the cost was reasonable and it was easy to use, why not encrypt sensitive or confidential email?

Affordable, Easy to Use and Deploy

Many companies today see the need for email encryption. Unfortunately, the majority of email encryption solutions are overly expensive and difficult to use and deploy. Not anymore. With Ceelox SecureMail you can protect sensitive and confidential information in a format that has never been easier or more affordable. Ceelox SecureMail offers a low cost of ownership versus complex and overpriced gateway and PKI solutions. Ceelox SecureMail can be easily configured to encrypt sensitive emails according to your company policy. Ceelox SecureMail enables you to securely deliver your sensitive information, and to proactively keep confidential information and data from prying eyes. With Ceelox SecureMail biometric or password authentication modes, access to encrypted information is significantly more secure than PKI solutions with encryption keys.

Ceelox SecureMail and Regulatory Compliance

Regulatory compliance covers a wide range of requirements. Ceelox SecureMail will provide you with a critical component for regulatory compliance. HIPAA, Sarbanes-Oxley, Graham-Leach-Bliley Act and other regulatory bodies require protection of sensitive electronic information, which includes email. The consequences of failure to comply with these regulatory bodies can have devastating effects on your enterprise which may include lost revenues, fines, negative publicity, loss of customers or loss of faith in your ability to protect their private information. Any business that wants to comply with regulatory bodies and show it cares deeply about its customers and employees benefits from using Ceelox SecureMail.

The Preferred Email Encryption Solution

Regardless of which email system your enterprise uses, Ceelox SecureMail streamlines how you send and receive confidential email communications. No emails are stored, no passwords are shared and user's email habits are not disrupted. Ceelox SecureMail offers the only biometric ready authentication solution. With biometrics, verifying your identity and sending an encrypted email is just one swipe of a finger away. Email interception is real. With Ceelox SecureMail, relax and send sensitive email with confidence. Finally, there is an email encryption solution that makes sense. Discover why Ceelox SecureMail is the preferred email encryption solution in the world today.

SecureMail Requirements:

Server Component:
(only if the customer is looking to host):
Windows 2000, Windows 2003, Windows XP Professional.
Microsoft SQL server.
