MOBILEFRAME®

Configurable Mobile Applications™

MobileFrame's revolutionary software platform allows business users with no IT background to create and deploy sophisticated mobile applications using point and click features. Mobile workers can connect to backend ERP systems in real-time to view enterprise data, capture rich data types such as digital signatures, photos, voice notes, fingerprints, RFID and bar code scans, etc. and print receipts while in the field.

MobileFrame's Smart Architecture™ integrates intelligent networking with a thick client so mobile workers always have complete workflow available regardless of network availability. Mobile applications automatically render to any windows-compatible device (Windows Mobile, Tablet, or Laptop). MobileFrame's Remote Software Updates and Auto-Device Driver Recognition features make software and device management simple.

Configurable. Office staff with no programming skills can easily create, update, and deploy assignments, workflow, and enterprise data to mobile workers.

Intuitive. A Graphical User Interface enables novice users to create workflow by means of built-in point and click features. All programming complexities are handled in the background so they are transparent to business users.

Reliable. Applications operate in or out of wireless coverage through Smart Client and Intelligent Networking technology.

Versatile. Mobile workers can capture rich data types such as RFID, photographs, digital signatures, sketches, and bar code scans in the workflow that is returned to the central office in electronic format.

Integrated. Secure real time bi-directional access to existing CRM, SCM, ERP, accounting, scheduling, and office productivity applications.

SAMPLE APPLICATIONS: FIELD SALES & SERVICE, INSPECTIONS, TIME KEEPING, REPAIR ORDERS, INVENTORY/ASSET MANAGEMENT, etc.
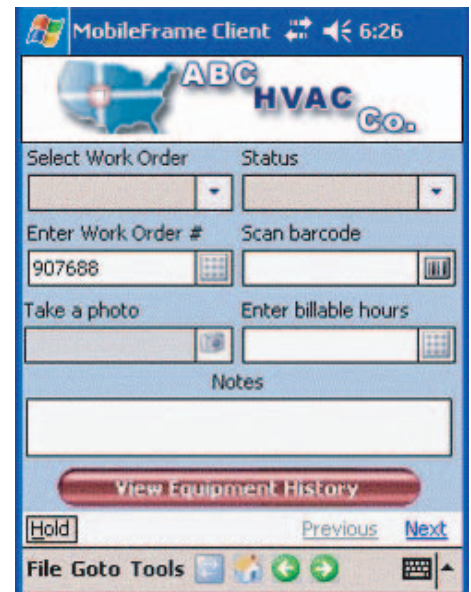

Custom Mobile Applications with No Custom Programming

Features

- Smart client operates online or offline
- Windows administrator desktop
- Schedule and manage projects
- Design tasks and workflow
- Manage access to Enterprise Data
- Report time and expenses
- Business rules definition and runtime engines
- Enforce Workflow

- Capture Photographs
- Scan Bar Codes
- Draw Sketches
- Speech Recognition (Tablet PC Only)
- Messaging and alerts
- Enterprise system connectors
- On-demand wireless LAN/WAN
- End-to-end data and system security

Sample MobileFrame DeskTop™ Screen

Key Benefits

User Configurable
Business administrators who manage mobile activities can easily create, update, and deploy assignments, workflow, and enterprise data to mobile workers, using an intuitive GUI based application.

Always Available
With local storage of data and business rules, the MobileFrame Client™ can operate with or without a persistent network connection, enabling workers to be continuously productive.

Network Efficient
Upon discovery of wireless or wireline access, the system automatically sends and receives queued transactions, content, and messages via a secure connection, optimizing user productivity while minimizing transmission costs.
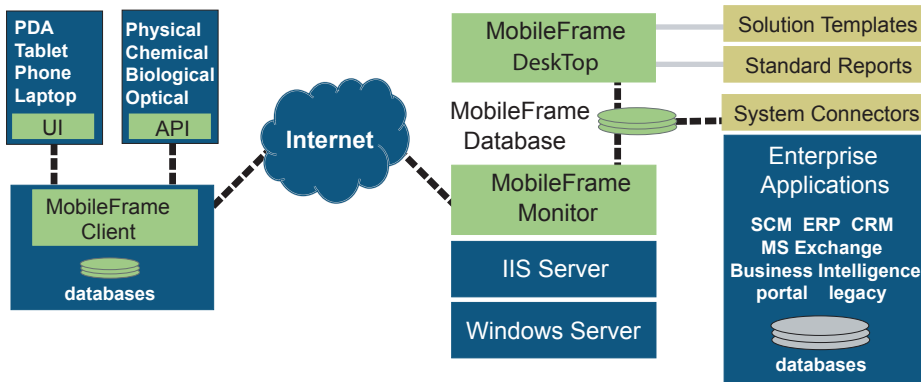

Enterprise Integration
Optional connectors enable secure and controlled bi-directional data exchange with backend CRM, ERP, SCM, finance, scheduling, Exchange, and legacy business systems.

Industry Standards
Designed to comply with key standards, leveraging existing and planned investments and enabling a growth path to future functionality. MobileFrame Server components based on Microsoft Windows Server 2000/2003, SQL Server, Oracle, and MobileFrame Client based on Microsoft CE .NET and SQL CE.

Components

- MobileFrame DeskTop™ Windows-based business and system administrator application
- MobileFrame Client™ Microsoft Windows Mobile™ based field worker application
- MobileFrame Monitor™ Windows-based synchronization Web Service
- MobileFrame SQL Mobility Database

System Requirements

Server Platform
Microsoft Windows Server 2000/2003, SQL Server 2000 or later. (IIS Required)

Handheld Clients
Any Microsoft .NET compatible device including PDAs, Tablets, and Notebooks

Desktop Clients
Windows 2000 Pro, XP, or Vista.

Networking
Wireless 802.3 or 802.11; LAN; EVDO/CDMA, CDPD, GSM/GPRS, or iDEN WAN; or 56k modem.

Middleware Support
Optional integration with popular mobile, wireless, messaging, and enterprise application gateways.
