

DocPath[®] for Citrix[®] XenApp[™]

Network Friendly Printing

DocPath[®] for Citrix[®] XenApp[™]
allows enterprises to design, merge, manage
and print business critical documents without
slowing down their network.

One of the major challenges faced by companies deploying Citrix[®] Access Suite is producing and then printing complex and technically demanding business documents without consuming significant amounts of bandwidth.

To meet that challenge, DocPath has developed DocPath[®] for Citrix[®] XenApp[™]. Ideal for large and medium size organizations, DocPath[®] allows Citrix[®] users to design business critical document forms, merge them with corporate data and then output the finished documents to a wide variety of devices and IT services.

Using the ICA[®] channel, DocPath[®] merges data with document forms on the Citrix[®] client, instead of on the server. By sending just the data to be merged to the client, DocPath[®] eliminates the transmission of bulky PDF or PCL files across the network. Network usage can be reduced by

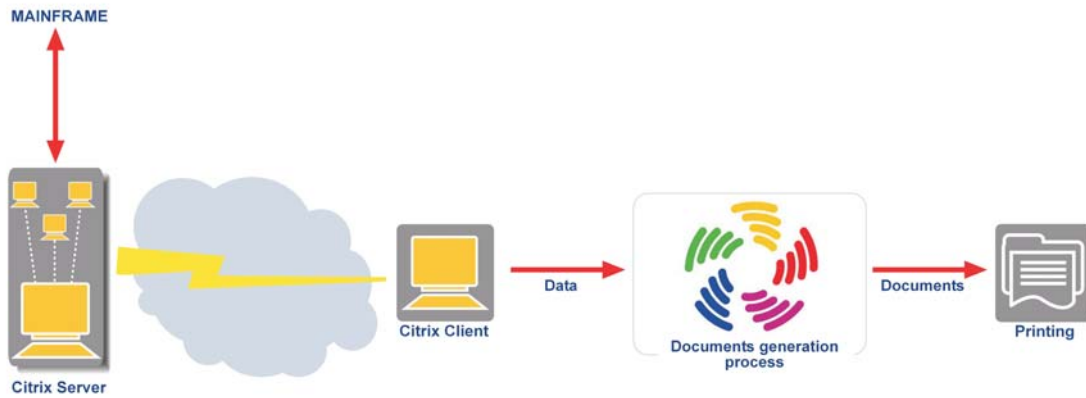

more than 95% for each document printed.

The same documents that are being printed on the client, can be automatically sent by the server component to fax and email servers, checked into document management systems and delivered to web servers. They can also be printed in batch mode using sophisticated high volume printers.

With features like version control and on-demand forms distribution, plus the use of standard Internet protocols, DocPath[®] ensures that no process is left hanging. Whether it is printing locally or integration with a complex web service, the job gets done right!

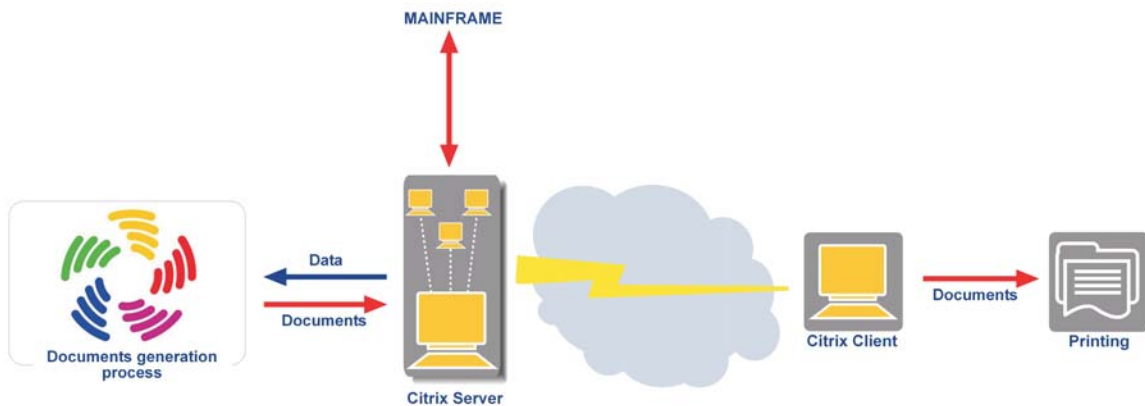

Scaleable, easy to use and secure, DocsPath[®] has more than 50,000 installations in 25 countries. It runs on Windows, Linux, Unix, iSeries, Open VMS and mainframes.

Distributed Document Generation and Printing

Application sends data to DocPath® for document generation and Printing. DocPath® transmits the data to the client machine where the document is generated and printed.

Centralized Document Generation and Distributed Printing

Application sends data to DocPath® for document generation and Printing. Document is generated and compressed on the Server. DocPath® transmits the Document to the Client machine where it is decompressed and printed.

Citrix® and ICA® are Registered Trade Marks of Citrix Systems, Inc.
DocPath® is Registered Trade Mark of DocPath USA.
