FreightMaster TMS®
Transportation Management Suite

NGL Next Generation Logistics, Inc.

FreightMaster TMS® is a complete enterprise transportation planning and execution system for businesses of all sizes. FreightMaster TMS® easily interfaces with many different ERP systems to provide users with extended best-of-breed transportation management that fits within their existing technology investment. FreightMaster TMS® can be quickly deployed either On Premise or Hosted On Demand.

PRODUCT BENEFITS:

Carrier Selection and Routing
FreightMaster TMS® saves money and time by finding the most efficient mode, route and carrier for each shipment. Based on predefined "business rules" the system will select the appropriate carrier and route sorted by price and distance to determine the lowest-cost solution based on each unique order.

Routing Guide Compliance
Automated carrier selection reduces your costs and increases customer satisfaction. It also ensures compliance with customer-provided routing guides as well as with your own internal carrier policies. The flexible, rules-based engine in FreightMaster TMS® helps you make cost-effective carrier selections, while respecting the customer's specific routing requirements and requested delivery times.

Optimization
FreightMaster TMS® creates highly efficient shipment plans across all modes of transportation with optimal routing and load consolidation resulting in lower costs. FreightMaster TMS® maximizes capacities and minimizes miles to create better, more optimal routes.

Online Freight Bill Settlement
FreightMaster TMS® automates the tedious process of managing freight bills. Using the actual shipment data captured, Carriers enter delivery date information and freight bills online triggering an audit that when passed, will transfer to your ERP system for payment or hold it if failed ensuring you are paying, billing, and tracking only for the transportation services provided.

"Through the implementation of TMS, companies on average can expect to lower freight budgets by 5 percent to as high as 25 percent in first year depending on mode mix and existing adherence to best practices."
