earlyCASE
where eDiscovery STARTS
Early Case Assessment & Analytics

earlyCASE is a web-based application, which runs on your local PC, and analyzes the electronically stored information (ESI) that your computer can access. earlyCASE provides an immediate eDiscovery analysis of your data and produces 15 high-quality eDiscovery reports which provide a summary of details on the data you actually have and how long it will take to process and review it, including an extensive 26(f) report for meet and confer. earlyCASE identifies duplicate documents and assists in developing filter and culling rules to dramatically reduce the amount of eDiscovery to be processed and reviewed. It supports multiple languages, extracts MetaData and generates hash values, detects duplicates and creates a local inventory database of documents and emails. earlyCASE is available through a free Basic version or a Professional version, which includes more features.

FREE Basic Version

ESI/eDiscovery Analysis of Your Data
Web-based Application
Processes Microsoft Exchange PST Files
Extracts MetaData
Supports Multiple Languages
Creates Professional Reports, Charts & Graphs
