PlasmaCar

Pure Energy • Pure Fun

TURN THE
STEERING
WHEEL AND
AWAY YOU GO!

HOW IT WORKS

PlasmaCar harnesses inertia, centrifugal force, and friction to propel kids of all ages to fun.

Just rotate the steering wheel from side to side to go forward and flip the wheel 180 degrees to steer backwards. The smoother the driving surface, the faster you go. To stop, cease rotating the steering wheel and put your feet onto the ground.

Extensively tested to meet or exceed all significant international safety standards.
