

WIFILAND'S MARINA PACKAGE

*Attract Boaters & Marina Guests
Generate Additional Revenue
Offer Premier Wireless Services*

Wireless Amenities Increase Dockages

Want to attract more boaters? Need to differentiate your facility from others in the marine industry? WiFiLand provides economical, undistruptive, bandwidth scalable, and secure wireless technologies. Our package will increase your service offerings and your revenue! Your WiFiLand wireless network provides Internet roaming throughout the marina, on each boat, and in the common facilities such as the administrative offices, dock house, and gardens.

Marina owners or managers who want to offer high-speed Internet and make additional money have lucrative options through revenue sharing plans. Many marinas held off installing high-speed connections because of cost but still want to provide access to email, online weather or fishing reports, and nautical maps. Provide freedom so your guests can use their handheld devices and computers on their boats. You will leapfrog your competition and take more ownership of your amenities' earning potential.
