

WiFiRV'S Turnkey RV Park Solution

*Attract RV Park Guests
Generate Additional Revenue
Offer Premier Wireless Services*

Wireless Amenities Increase RV Guests

Want to attract more guests to your RV Park? Need to differentiate your facility from others in your industry? WiFiRV provides economical, undisruptive, bandwidth scalable, and secure wireless technologies. By offering this amenity in your RV Park, you will increase your service offerings and your revenue! Your WiFiRV wireless network provides Internet roaming throughout the park, on each RV, and in the common facilities such as the administrative offices, recreation areas, and gardens.

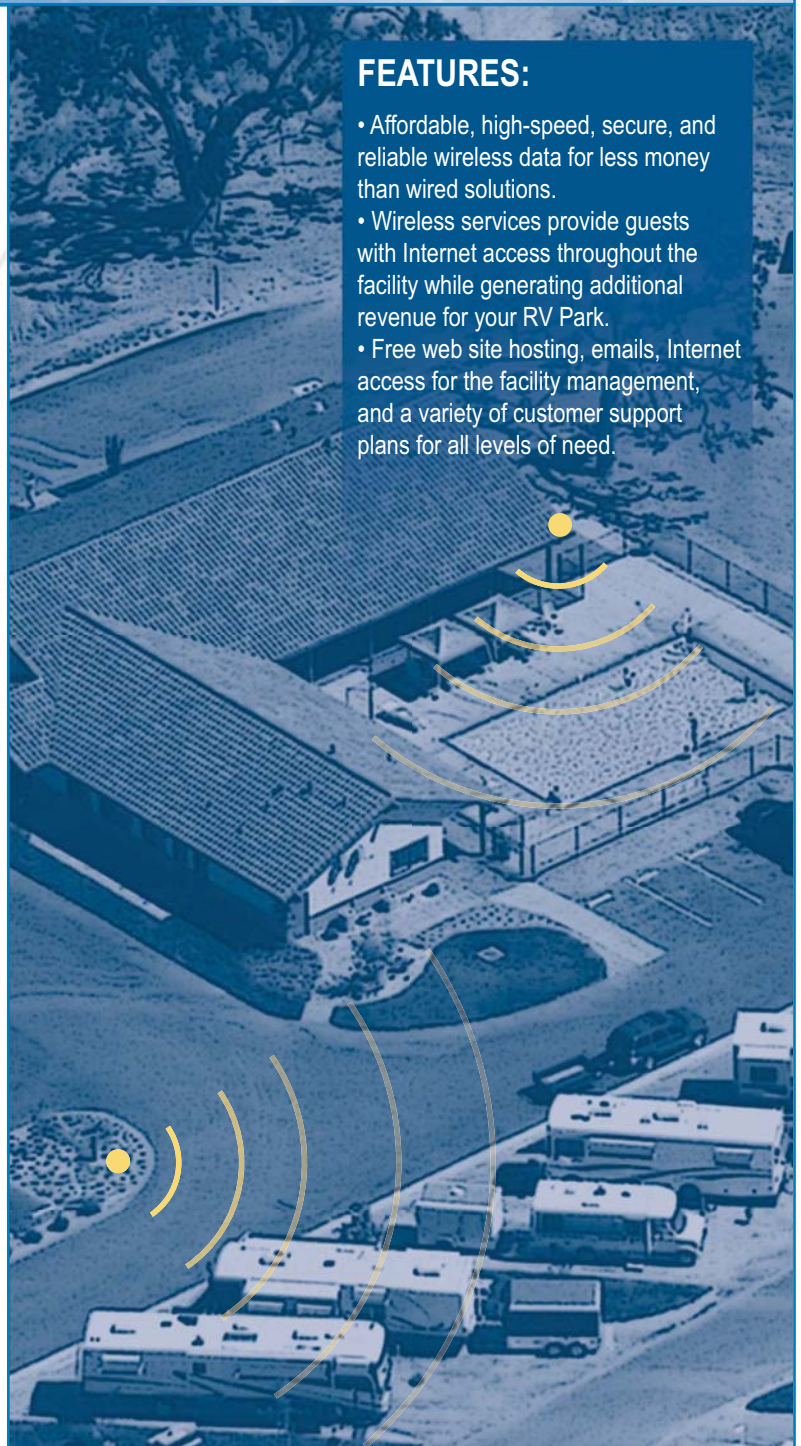

Park owners or managers who want to offer high-speed Internet and make additional money have lucrative options through revenue sharing plans. Many owners held off installing high-speed connections because of cost, but still want to provide access to email, online weather, road maps and travel reports. Provide your guests with the freedom to use their handheld devices and computers through out the RV Park.

In addition, once a park guest becomes a WiFiRV subscriber, they will be able to use their accounts in over 5,000 other WiFi "Hot Spots" throughout the country at no additional charge. By keeping your guests connected while on the road, you will leapfrog your competition and take more ownership of your amenities' earning potential.

FEATURES:

- Affordable, high-speed, secure, and reliable wireless data for less money than wired solutions.
- Wireless services provide guests with Internet access throughout the facility while generating additional revenue for your RV Park.
- Free web site hosting, emails, Internet access for the facility management, and a variety of customer support plans for all levels of need.
