

**Software Benefits:**

- ➔ Meet regulatory compliance
- ➔ Drag and drop ease
- ➔ DOD grade AES 256 encryption
- ➔ Added security of fingerprint biometrics
- ➔ Available FIPS 140-2
- ➔ For internal/external storage devices

Biometric File/Folder Encryption made Simple.

Data breach costs including internal investigations, customer notification, crisis management, regulatory compliance and post breach surveillance... are estimated at \$200 per record. However, companies agree that the most significant cost of a data breach is the damage to a company's reputation and brand. With over 200 million customer records exposed in data breaches in 2007, how are you protecting your sensitive data? The vast majority of data breach incidents involve laptops. Add to that the millions of flash memory devices currently in use and your risk of a breach is imminent. On the other hand, Ceelox Vault provides the strongest form of encryption available. Access to your encrypted data is doubly protected with biometric authentication.

Introducing: Ceelox Vault

Biometric File/Folder Encryption made Simple.

Why Ceelox Vault

As simple as drag and drop, data security software finally makes sense. Ceelox Vault puts you directly in control of your information security with strength and simplicity. In today's world, securing critical enterprise data has never been more important. We created Ceelox Vault because we recognize the value of easily securing confidential data. Ceelox Vault is the ideal solution for protecting any confidential information whether it is electronic protected health information (ePHI), credit card numbers, social security numbers, personal financial information, bank account information, business plans or intellectual property.

Ceelox Vault is Affordable, Easy to Use and Deploy

Companies have been investing in portable data protection products for years. These tools are often expensive, difficult to use, difficult to maintain and difficult to deploy. Not anymore. Ceelox Vault is affordable whether it is deployed on laptop or desktop computers or portable storage devices like flash memory sticks and portable hard drives. At Ceelox, our philosophy is simplicity. Security software should never make the user feel incapable of using it. Encrypting sensitive files and folders is now as simple as drag and drop. With Ceelox Vault, get the best of all worlds: a simple and easy to use data protection application, out-of-the-box biometric authentication for data access and a truly portable encryption and decryption system for your sensitive data.

Protect Your Existing Portable Memory Devices

How many employees do you have using flash memory devices or thumb drives? In 2006, there were over 100 million portable memory devices sold, the vast majority of which had no encryption capability whatsoever. Businesses with existing non-biometric or non-encrypted portable memory devices are a download away from mitigating one of the largest information security risks today. Ceelox Vault offers an intuitive and easy to understand graphical user interface with rich user preferences. It is easy for your employees to encrypt the information on their existing portable memory devices without having to purchase a new device. Through a simple download, Ceelox Vault offers you the ability to secure existing flash memory devices which currently represent existing security leaks in your environment. Maximize your existing investments, while planning for the future. Protect your existing portable memory devices with Ceelox Vault today.

The Preferred Portable Data Encryption Solution

When Ceelox Vault is operating on a portable memory device there is zero footprint on the host computer. There are no files loaded to the PC or installation required. Ceelox Vault is a truly portable data encryption solution. Popular Full Disk Encryption solutions encrypt your entire hard drive or operating system. The key to this encryption is typically a password. Once decrypted and opened, the entire laptop is exposed. Without question, the majority of data security breaches are internal. The true need is protecting specific files and folders that contain sensitive or confidential information. Take your sensitive information with you wherever you go with confidence. Ceelox Vault is the preferred portable data encryption solution today.

Vault Requirements:

Portable Edition:

Windows 2000, Windows 2003, Windows XP/ XP Professional, Windows Vista.
Compatible USB 2.0 external storage device.

PC Edition:

Windows 2000, Windows 2003, Windows XP/ XP Professional, Windows Vista.
Compatible USB 2.0 fingerprint scanner.

Other Ceelox Products:

Ceelox ID®

Authenticates users via biometrics before allowing access to personal computers, files, external drives and networks.

Ceelox ID Online®

Secures and manages user access to internet sites or networks using biometric authentication. Fingerprint Enabled Layered Encryption Authentication for Web Sites and Networks.

Ceelox SecureMail™

Encrypts email exchanged over a network or internet which includes a simple, easy-to-use Outlook plug-in.

"Secure information and data in ways that are convenient and easy to use."

- John D. Ashcroft
