Live Maps v3

## for Operations Manager 2007

NETWORK & APPLICATION TOPOLOGIES

IT DASHBOARDS

GEOGRAPHICAL VIEWS

BUSINESS PROCESS AVAILABILITY

Can you explain how an IT failure affects your business?

IT problems are impossible to solve without context. Alert and distributed application views simply do not provide sufficient information to respond quickly and accurately. Live Maps seamlessly integrates with Operations Manager 2007 to give your IT organization the right context to make intelligent business decisions. Only Live Maps puts IT problems in business terms.

Live Maps allows IT Pros to map IT objects into dashboards, business processes and service topologies. Live Maps brings real-time, relevant information to users based on role. IT Pros see topologies and geographic maps. Business users see processes. Executives see dashboards. Everyone gets the right view. Live Maps ensures that organizations unlock and realize the ultimate value of Microsoft Operations Manager 2007.

Live Maps Puts IT In Perspective

Simplify Complexity

IT environments are complex; monitoring should be simple.

Display complex network and application failures in easy to understand maps.

Simplified maps immediately indentify business scope and impact.

Wizards and templates simplify implementation, configuration and updates.

Change-Aware

Maps are dynamically updated as IT environments change.

Save hours building, maintaining and rebalancing monitoring maps.

Instantly create hundreds of maps in minutes based on simple rules.

Authorize the right team to view and maintain maps.

Business End-to-End

Visualize business impact to resolve the most critical problem first.

Build nested, end-to-end views of any IT environment as a business process.

Holistic approach reduces troubleshooting time and unnecessary problem hand-offs.

Run context-aware tasks and recoveries to guarantee service levels.

for System Center Operations Manager 2007

Live Maps v3
for System Center Operations Manager 2007

Put IT In Perspective

Benefits

Live Maps unlocks significant value in Ops Mgr. Live Maps allows IT Pros to create context and process-aware monitoring maps that perfectly fit any business.
By adding Live Maps to Operations Manager 2007, IT organizations are able to maximize existing and future systems management investments. This promises that IT organizations can do more with existing people and infrastructure.

With Live Maps you can:
– Determine business impact 70% faster
– Increase user accessibility to critical and relevant OpsMgr data by 60%
– Visualize immediate Executive value from Operations Manager
– Manage larger more diverse environments with existing IT operators

Features

Your Map, Your Way
– Create maps for technical and business users
– Create business process, topological, geographical or dashboard maps
– Over 300 geographical maps included

Access from Anywhere
– All maps are role-based and web accessible
– Display dashboards and business process maps in existing IT portals
– Availability reports created instantly based on map dependencies

Maps atop Maps
– Create unlimited nested relationships across map type
– Quickly drill down from business process level to rack level
– All maps allow for customized health-state roll-up

Seamless Integration
– Fully integrated into the Operations Manager console
– Contextual access to all Operations Manager functionality
– Adheres to Operations Manager's built-in security

Easy to Use
– Wizards and templates make configuration simple
– Simple drag and drop interface
– Deploy useful maps in less than 10 minutes
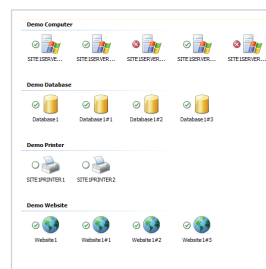

Examples

Quickly build and visualize the health of an order-to-cash process

Use templates and wizards to instantly create high-level business dashboards

Quickly transform a Visio-diagram into an overview-monitoring map

Use list views to dynamically group objects based on simple rules

Create network topologies that are link aware

Add geographical perspective to Operations Manager

System Requirements

Hardware:
– Uses existing Microsoft Operations Manager 2007 deployment

Software:
– Live Maps Authoring console is installed with the Operations Manager 2007 console
– Live Maps OpsMgr Extension is installed with the Operations Manager 2007 console

Unlock the full potential of Operations Manager 2007 with Live Maps. Translate IT to your company's language once and for all.
