

## No Expensive Hardware, No Big Purchases – Just Easy, Portable Text to Speech

*TextAloud works with almost any portable audio device imaginable – from MP3 Players, to iPhones, to Your TV – and beyond!*

Brought to you from the leaders in Text to Speech at NextUp.com, **TextAloud** has become well-known as a useful, simple and convenient software program that allows users everywhere to listen to their reading “on the go,” and in natural, human-sounding speech (and even in the accent of their choice!).

Unlike some of the latest expensive gadgets and technologies, *TextAloud* doesn't require special hardware or expensive purchases in order to function. Instead, the software enables PC users to export their reading into sound files for listening on just about any format desired – from **portable MP3 players** of all kinds, to **iPhones** and **iPods**, **Blackberries**, **laptops**, or simple export to CD, for listening in the car or office. *TextAloud* can also be listened to on **TV**, using Tivo's<sup>®</sup> Home Media Option, and it's even integrated with **iTunes**, where it can automatically place created audio files for easy syncing with the user's iPod<sup>®</sup>, iPhone<sup>™</sup>, or other iTunes-compatible portable audio player.

This commitment to convenience and ease of use means that *TextAloud* – priced from just **\$29.95** – is a cost-effective solution for listening to your reading in today's tough economy. From students and teachers, to corporate users and commuters, from the learning-disabled or those with ADD/ADHD to users with visual impairments, *TextAloud* is a proven resource for maximizing time and enriching the reading experience for diverse users in all walks of life, all over the world. The program's ease of use also makes it ideal for elderly users (who can understandably find so much of today's technology a little daunting) seeking to support failing eyesight in reading 'by ear', instead.

*TextAloud* features the best in computer speech, with natural, non-robotic voices that are a far cry from the toneless robotic voices once expected in computer speech. Optional premium voices also include **AT&T Natural Voices<sup>™</sup>**, **Nuance RealSpeak<sup>®</sup>**, **NeoSpeech<sup>®</sup>** or **Cepstral<sup>®</sup>** voices.

*TextAloud*-compatible devices include:

- MP3 players
- iPhones
- iPod Touch devices
- MP3-capable Blackberry devices
- CD players
- PC computers and laptops (using Windows<sup>®</sup> 98, NT, 2000, XP, Vista)
- Tivo<sup>®</sup>-enabled Televisions (via Tivo's Home Media Option)
- And much more!

For more information, to order, or to download a free trial: please visit [www.NextUp.com](http://www.NextUp.com)! Meanwhile, to review a copy of *TextAloud* for the media, please contact Angela Mitchell at [Admitchell@nextup.com](mailto:Admitchell@nextup.com) or (904) 982-8043.
