DMS FEATURES

Handling Phishing Alerts

Detect Monitoring Service prevents, detects and recovers from phishing and malware attacks. The solution addresses the entire lifecycle of an alert providing the right and just-in-time help when you most need it.

Early Notification

Detect Monitoring Service, backed up on DetectCA proprietary methodology, can identify specific patterns and behaviors that typically occur at the early stages of a phishing attack, and hence providing a way to stop an attack even before it becomes a real threat.

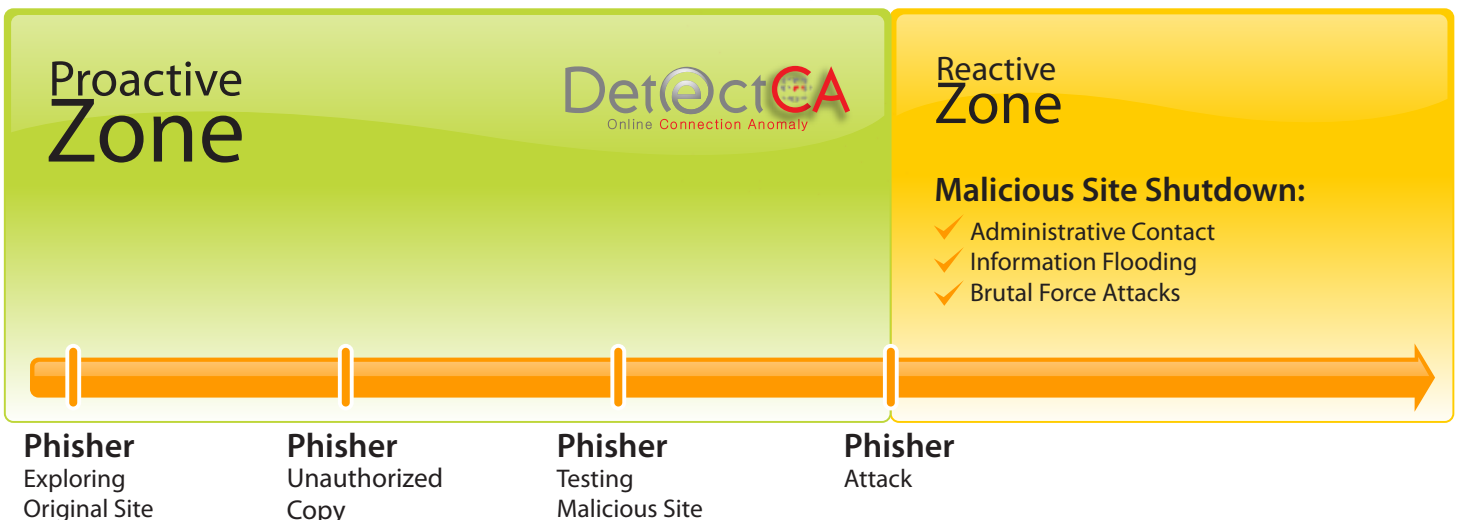

Minimize Losses and Impact

By minimizing the time a real threat is targeting your customers and implementing the right mitigation plan, Detect Monitoring Service can effectively reduce losses impact virtually to zero when early notification is triggered.

Malware Monitoring

Easy Solutions monitors on daily basis hundreds of samples of new financial motivated malware which enable us to proactively and quickly implement an action plan when a malicious code is attacking your clients.

Protective Timeline
