

# Student Success. Your Success.

*Summer pilots now forming*

## Which of your students are at-risk, TODAY?

Timing is everything. Knowing as soon as possible that one of your students is struggling with academic, financial or social pressures is critical to helping them be successful.

With Starfish®, you can turn your course management system (e.g., Blackboard) into an early warning and student tracking tool, alerting you to which students are at-risk in real time. Then you can connect those students to the support resources designed to help. Plus, you can document their daily interaction with instructors and advisors.

Best of all, the system requires no additional hardware or IT staffing to install, operate or maintain.

"The current pilot program with Starfish is aimed at getting at-risk students in for help faster, increasing the number of students who are receiving support, and closing the loop with faculty that have alerted us to the issue."

**Carol Brooks**  
Director of Academic Services  
Kettering University

## Summer pilot, Simple process

Introducing a new solution to your faculty and students always carries its own challenges. To help you make the best decision for your institution, Starfish offers a valuable pilot program.

Whether your goal with a pilot is to evaluate the impact of Starfish on your current processes, gauge user feedback, or simply kick the tires, we are here to help you.

Pilot planning is straightforward, with most pilots live within one week of kick-off. We'll walk you through the steps, including:

1. **Set-up** — courses, instructors and grades automatically transferred via Blackboard Building Block
2. **Training** — 45 minute session, materials provided
3. **User Set-up** — less than five minutes

Plus, we'll support you throughout the pilot to ensure success.

*That's it. Simple for you. Empowering for your institution.*
