### What Makes Our Online Courses Unique

Our online courses are unique because they're set up much like the seated classroom: participants can listen to a voiced lecture and get feedback on their work. Once signed up, participants have unlimited access to each module for one week, and can download and print each module supplement, which explains the concepts discussed in the lecture in greater detail and provides additional resources.

### Scientific Writing

The six-week scientific writing course includes:

- A voiced lecture;
- Multimedia window;
- Supplement;
- Assignment.

The **voiced lecture** covers the main topics of the lecture;

The **multimedia window** provides examples, graphics, or video content as discussed in the lecture;

### Supplement

The **supplement** is a downloadable pdf file that contains:

- Additional **discussion** of the lecture's points;
- **Examples** that further explain or illustrate concepts discussed in the lecture;

- **Resources**, such as books, articles, and websites, that you can refer to for additional information.

### Assignment (Weekly Writing Options)

The concept behind the downloadable **Assignment** section is that by completing the assignments, you will learn to better analyze your own and others' writing, which should enable you to make better informed choices in terms of language, style, tone, and organization.

**The Assignment section** gives you three options: the opportunity to

- write or continue to work on a document of your choosing (a report for work, an article for publication, a thesis, for example);
- work on a case study provided in the assignment;
- work on scientific articles published in your field.

**Module 1: Writing Fundamentals**

**Module 2: The Writing Process**

**Module 3: Using Language Effectively**

**Module 4: Meeting Reader Needs/Writing Supplemental Components**

**Module 5: Writing the Scientific Report/Building the Argument**

**Module 6: Writing and Editing Strategies**

**Cost: \$499 per person; discounts for multiple attendees**

### Technical Writing

Like the six-week course in scientific writing, the four-week course contains many of the same features, including:

- a **voiced lecture** that covers the main topics of the lecture;
- multimedia window that emphasize various aspects of the course.

### Supplement

The **supplement** is a downloadable pdf file that contains:

- Additional **discussion** of the lecture's points;
- **Examples** that further explain or illustrate concepts discussed in the lecture;
- **Resources**, such as books, articles, and websites, that you can refer to for additional information.

## **Assignment (Weekly Writing Options)**

The concept behind the downloadable **Assignment** section is that by completing the assignments, you will learn to better analyze your own and others' writing, which should enable you to make better informed choices in terms of language, style, tone, and organization.

**The Assignment section** gives you three options: the opportunity to

- write or continue to work on a document of your choosing (a report for work, an article for publication, a thesis, for example);
- work on a case study provided in the assignment;
- work on technical articles published in your field.

Participants get professional written feedback on the writing assignments they submit.

The modules cover the following:

**Module 1** The Rhetorical Context and Writing as Persuasive

**Module 2:** The Writing Process

**Module 3:** Effective Language Use

**Module 4:** Editing and Proofreading Strategies

**Cost: \$399 per person, with discounts for multiple attendees**
