Integration: JIRA Connector for Jama Contour

Overview

Bridge the communication gap that's very costly to ignore.

The JIRA Connector for Jama Contour integrates two popular solutions used by companies to successfully plan and build new products. This integration will help your organization accelerate development cycles, ensure quality and eliminate costly redundant effort.

By connecting Contour with Atlassian JIRA, you can keep your product management and development teams in sync at all times - removing a communication issue that costs companies billions every year.

Two great tools that work great together.

Organizations are experiencing greater results by integrating best of breed solutions that specialize in specific areas of the development process. When teams are free to use the tools they prefer, they are dramatically more productive. Now, with the integration of Contour and JIRA, both sides of the organization can work in harmony.

Analysts & Product Managers Use Contour for:
- Requirements management
- Traceability & change control
- Release planning & management
- Robust reporting & document creation

Developers & Testers use JIRA for:
- Defects & issues tracking
- Task management
- Sprints & backlog planning
- Agile project management & workflow

"Our analysts work in Contour and our developers work in JIRA. This integration will save us a tremendous amount of time and ensure our entire organization is in sync on the latest scope and status of what we're building."
– Cherine Day, business analyst, Stratos Global, a leader in satellite communications
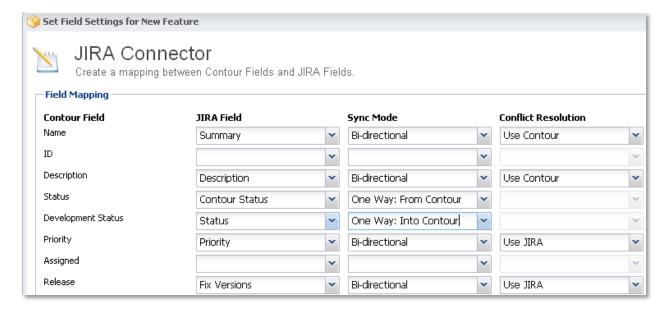

Benefits

Save Time, Save Money

Without the JIRA Connector for Jama Contour, organizations could spend hours and hours just trying to communicate plans and status of work to each other using either documents or manual imports between systems. With the integration, you can automate this process, and gain back valuable time to devote to more important activities. Whether you're a small start-up or a large global organization, this integration can translate into significant cost savings that you'll realize immediately.

Stay Connected

By connecting these two solutions together, now your organization can leverage the robust end-to-end traceability and impact analysis features of Contour to create relationships between requirements and all the other downstream items such as tasks and defects. That way, when a change occurs, you can instantly access the full impact it has on other aspects of your projects and alert the people on your team that are affected.

Ensure Consistency of Data

"Automated bi-directional synchronization" – it's a mouthful to say, but a significant benefit of this integration. What it means in non-technical terms is that after you've mapped your projects, sets and specific fields between Contour and JIRA, you can configure the JIRA Connector to send items in Contour to JIRA then keep both systems up to date through the automatic synchronization to ensure consistency of data when updates and other changes occur. That way regardless of whether you work in Contour or JIRA, you'll be up to date on the status of features, requirements and other items you care about.

Succeed in an Agile World

Agile is more than just a development methodology, it's a cultural mindset of doing things faster, more collaboratively and being responsive to change. This integration with Contour supports organizations who are adopting agile techniques within a hybrid development process, including the JIRA Greenhopper plugin.

Pricing & Licensing

Unlimited Use, Unlimited Value

The JIRA Connector for Jama Contour is sold as an enterprise license that entitles your entire organization to perpetual use and unlimited users, projects and sets of items. **All prices are listed in U.S. dollars.**

License Type	Description	Initial Purchase	Maintenance Renewal
Enterprise license	Out of the box integration between Jama Contour and Atlassian JIRA for unlimited users, unlimited projects and unlimited sets of items.	$7,500	$1,500

Note: At Jama, every customer receives premium support as part of their active maintenance plan. There are no multi-tier support programs to navigate through. Support and maintenance are included with the license costs for the first year, and then renewed annually.

"We take a best of breed approach and use specialized tools such as JIRA and Contour for ALM. I appreciate that Contour focuses on enterprise requirements management and doesn't try to do everything. My team sees a lot of value in this integration."
— Dan Anolik, Systems Manager, Jeppesen, a Boeing company

About Jama Software. People against Project Failure.

Jama's mission is to help companies build great products by taking a collaborative approach to requirements management. Founded by a team of experienced software professionals, Jama has created a powerful Web-based application called Contour that helps organizations increase customer satisfaction, accelerate development cycles and ensures high quality products.

Used by thousands worldwide to build sophisticated software, products and systems, Contour customers include Intel, Amgen, Bio-Rad, Virgin Media, Wells Fargo, Fluid, SMART Technologies, Tectura, Stonesoft, Stratos Global and many others.
