

Cargo Hook Kits

Robinson R44 & R22 Helicopters

- ▶ Expand potential work opportunities by adding external load work capabilities
- ▶ Lightweight kits include everything you need for full installation
- ▶ Installation is quick and easy using readily available tools
- ▶ Extends just 7 inches (17.78 mm) from the fuselage for ample ground clearance
- ▶ Optional keeperless technology allows you to safely use a wide variety of load ring sizes and styles, as well as open and release without any weight on the hook

Turn your Robinson helicopter into an enhanced profit center and make the most of your investment with an Onboard Systems cargo hook kit! R22s and R44s are economical light utility aircraft that are fully capable of performing a variety of external load tasks. Onboard Systems has designed a number of complete cargo hook systems for the R44 and R22 featuring our proven TALON™ cargo hooks. Our cargo hook kits enable you to expand the services your light helicopter can provide, making it more valuable and potentially bringing more revenue into your business.

Our kits have been certified by the FAA, Transport Canada, EASA and other international aviation organizations and have been installed on Robinsons worldwide. Designed with the latest safety innovations and user-friendly features, these must-have accessories will give you reliable and capable service, day in and day out.

LIGHTWEIGHT & EASY TO INSTALL

Each kit comes with everything you need for full installation and operation, including your choice of our TALON LC or TALON LC Keeperless hook (see Figure 1 on back page), hook attachment hardware, manual release cable, release handle, switches, and wiring. Installation is quick and easy using readily available tools and our step-by-step instructions.

Best of all, the entire kit weighs only five pounds and extends just seven inches below the fuselage, preserving aerodynamic lines and providing ample ground clearance. The airframe and control cables are protected by travel limits built into the attachment hardware (see Figure 2 on back page). Raven II owners also have the option to get an Onboard Weighing System, allowing pilots to make informed loading decisions and reducing the risk of overload stress.

LOW MAINTENANCE COST

Onboard's TALON cargo hooks are less expensive to own and operate than other brands of cargo hooks. Service can be performed at your facility, or you can return the hook to the factory for service. What's more, our components are designed for long life, and replacement parts and spares are readily available and can usually be shipped out the same day you place your order.

BEST VALUE & SUPPORT

In addition to favorable pricing and a range of useful features, our products are backed by world-class customer support, including field and hangar experienced A&P mechanics. Complete documentation is available 24x7 at our website. Easy to install, economical to maintain and supported worldwide, our cargo hook systems let you lift with confidence! Expand your business horizons by ordering one of our TALON Cargo Hook Kits for your Robinson aircraft today. ❖
