

**This arm helped John McEnroe win 155 tennis titles.**

**Today he uses it to screen for prostate cancer.**

When his dad was diagnosed, John discovered that prostate cancer was a more serious risk than he ever imagined. In fact, 1 in 6 men in the U.S. will be diagnosed with it in their lifetime. John also learned there's something you can do to monitor your risk of prostate cancer. It's a simple blood test called a PSA. Updated AUA guidelines suggest you start screening at age 40. Ask your doctor about it. For more info, go to [ProstateCancerWatch.com](http://ProstateCancerWatch.com).
