REUTERS COMPANY REPORT DISCLAIMER

This research report is provided for informational purposes only and on the condition that it will not form the sole basis for any investment decision. Reference to any company is not a recommendation to buy or sell the shares of such company. The information used for, or presented in, this report has been obtained from sources believed to be reliable, but Reuters makes no representation as to the accuracy or completeness of such information. This report is intended only for users in the United States. Reuters has no obligation to update, modify or amend this report or to otherwise notify a reader thereof in the event that any matter stated herein becomes inaccurate. Reuters and/or its affiliates/investors may hold securities positions in the companies discussed in this report and may frequently trade in such positions. Such investments may be inconsistent with the quantitative analysis provided in this report.

This report was generated using a proprietary quantitative model that leverages widely accepted statistical methods and financial concepts to rank and rate a universe of more than 4700 US companies and US-listed ADRs with a market capitalization greater than \$50mm based on a series of financial attributes. These ratings are not intended as an indication of how an individual's investment will perform. As used in this report, "Outperform" designates the companies that rank in the top 30% of companies covered by Reuters, "Neutral" designates the middle 40%, and the bottom 30% are designated "Underperform". All ratings are relative to the universe of companies covered by Reuters and not to any specific benchmark.

Performance Rating: Outperform

Reuters ratings are based on a proprietary model that leverages widely accepted statistical methods and financial concepts to select attributes shown to be strong indicators of future stock price performance and applies these to rank stocks along a normal distribution curve. Ranks for Fundamental Quality, Value Catch-up, Operational Trends and Technical Factors are combined into a Composite Rating of Outperform, Neutral or Underperform.

Reuters Composite Rating

We cannot guarantee that each stock will perform in accordance with its rank. But we do believe that over the long term, stocks rated Outperform (30% of all stocks we rate) will, in the aggregate, outperform stocks rated Neutral (40% of all stocks we rate), and that stocks rated Neutral will, in the aggregate, outperform stocks rated Underperform (30%). All analysis is based on publicly available company financials, fundamental ratios, relative rankings of financial data and ratios, and observed security prices.

MNAP shares are presently rated OUTPERFORM. No forecast is made for the stock market as a whole. However, we do believe that whichever way the market moves, stocks rated OUTPERFORM have, in the aggregate, a higher probability of performing better than most others.

Component Rating

"Under" = Underperform

Component Weight

Types of investment criteria differ in how useful they are for predicting future stock movement. Based on our research, the Composite Rank assumes these relative degrees of importance.

Fundamental Quality Component: Neutral

This rating is based on characteristics traditionally associated with "good" companies. We focus on how each company measures up against others, and give careful attention to recent improvement or slippage relative to other companies. TTM = Trailing Twelve Months.

	Very Negative	Negative	Neutral	Positive	Very Positive
TTM Return on Investment					
Improvement in TTM Return on Investment					
TTM Pretax Margin					
Improvement in TTM Pretax Margin					
Depreciation in Excess of Capital Spending Needs					
Issuance/Repurchase of Common Shares					
Common Shares Dilution					
Presence/Absence of Unusual Income Items					

Value Catch-up Component: Outperform

This rating measures the extent to which the share price adequately reflects improving or eroding fundamentals, and favors shares whose prices have been slower to "catch up" to improving performance measures. TTM = Trailing Twelve Months.

	Very Negative	Negative	Neutral	Positive	Very Positive
Price Catch-up with TTM Earnings					
Price Catch-up to TTM Sales					
Price Catch-up to TTM Free Cash Flow					
Price Catch-up to MRQ Book Value					

Operational Trends Component: Neutral

This rating reflects how strong a company's recent Sales and EPS (reported as per GAAP) growth have been relative to other companies we rate. MRQ = Most Recent Quarter. TTM = Trailing Twelve Months.

	Very Negative	Negative	Neutral	Positive	Very Positive
Most Recent Quarter EPS Growth					
Improvement in EPS Growth for Consecutive Quarters					
Improvement in EPS Growth (MRQ vs. TTM)					
Most Recent Quarter Sales Growth					
Improvement in Sales Growth (MRQ vs. TTM)					

Peer Comparison

This section shows the comparison of key components between MNAP and several of its peers.

Company Name (Ticker)	Composite Rating	Fundamental Quality	Technical Factors	Value Catch-up	Operational Trends
Manas Petroleum... (MNAP)	Outperform	Neutral	Neutral	Outperform	Neutral
Exxon Mobil Corporation (XOM)	Underperform	Outperform	Underperform	Underperform	Underperform
ConocoPhillips (COP)	Underperform	Underperform	Underperform	Underperform	Underperform

Technical Factors: Neutral

This rating is based on analyses of share price movements over a variety of time periods. We compare performance characteristics of individual stocks with those of all the others we rate. Generally speaking, our goal is to favor up-trending shares that have experienced recent corrections and de-emphasize down-trending shares experiencing uncharacteristic periods of strength. Here is how MNAP shares performed during the various periods we examined.

Price Change	
Past 7 days	34.7%
Past 30 days	20.4%
Past 60 days	-14.5%

Change for Past 180 Days: 490.0%

Change Between 60 and 30 Days Ago: -29.0%

Change Between 180 and 60 Days Ago: 590.0%

Getting Acquainted

Start your analysis by learning what the company does, how well it does it, where it stands relative to peers, and whether aspects of the corporate structure or capitalization are bothersome to you.

Business Summary

Manas Petroleum Corporation (Manas Petroleum) is a development-stage company engaged in the business of exploring for oil and gas, primarily in Central Asia and the Balkans. The Company is focused on the exploration of light oil prospects. The Company carries out operations both directly and through participation in ventures with oil and gas companies to whom it has farmed out a project. The Company is involved in projects in the Kyrgyz Republic, Albania, Tajikistan, Mongolia and Chile. The Company has a wholly owned subsidiary, DWM Petroleum AG, Baar (DWM Petroleum), based in Baar, Switzerland. On March 26, 2008, Manas Petroleum incorporated Manas Management Services Limited in the Bahamas, which controls 99% of Manas Energia Chile Limitada. Both subsidiaries were formed to consolidate the Company's property in Chile. The remaining 1% of Manas Energia Chile Limitada is owned directly by Manas Petroleum Corporation.

Share Price Trends

Stock price trends depict the collective opinion of the investment community. You don't have to agree with consensus views but seeing how others feel can help you decide what to look for as you go further in your analysis. Consider it similar to reading a review before seeing a movie.

1 Year Price Chart with Bollinger Bands and Relative Strength

Technical analysts believe a narrowing of the bands suggests a significant price movement, up or down, will soon occur. Also, many say stocks that move outside the bands and then back inside will soon move toward the opposite band. The Relative Strength Index (RSI) calculates the strength of the current price movement compared to other recent moves and may signal when a trend is unsustainable. Technical analysts also believe RSI peaks/valleys forecast changes in share price trends.

General Sentiment

You can follow popular opinion or choose a contrarian's strategy. Either way, you should know whether the Street is bullish or bearish. Investor sentiment is typically positive when the 50-day moving average is rising, especially if it's also above the 200-day moving average. Additionally, changes in price trend can be deemed more definitive if supported by higher than normal volume.

Price Performance

When stocks significantly beat or trail the S&P 500 or the industry, investors are looking more intently at company-specific matters than general-market factors. In the two percentile rank columns, a high "Rank in Industry" coupled with a low "Industry Rank" could signify a hot stock in a cold industry. The reverse, is also noteworthy.

Time Period	Actual Change	Percent Change	vs. S&P 500	vs. Industry	Rank in Industry	Industry Rank
4 Week	0.11	22.9%	17.1%	20.8%	83	18

Short Interest

A high or increasing short interest implies that many investors expect the stock price to decline. You can treat that as a warning. Or you can disagree with the crowd and buy stocks with high short interest in anticipation of a short squeeze (a rally that occurs when short sellers rush to buy a stock, fearing losses they might incur if they wait too long). Prospects for a squeeze are indicated by high readings in the "Days to Cover" column (which tells how many days it would take for all short interest positions to be covered if recent trading volume levels persist). The risk: The bears may be right. So research other aspects of the company.

Month	Shares	% Outstanding	Percent of Float	Days to Cover
July 2009		NA	NA	NA
June		NA	NA	NA
May		NA	NA	NA
April		NA	NA	NA

Insider Trading

Insider buying can be seen as bullish because, presumably, their company knowledge is superior. However, insider sales are less reliable because insiders may sell for a variety of reasons that have nothing to do with their opinion of the stock.

In the last 6 months, there have been NA insider purchases for a total of NA shares, and there have been NA insider sales for a total of NA shares.

Net Change (6 months) NA mil
6 Month Net Transactions NA

Institutional Ownership

It's worthwhile to know what institutions are doing simply because their stock positions can be so large. In the short term, stocks will perform well if institutions are buying and perform poorly if institutions are selling.

NA institutions own NA of the 0.12 billion common shares outstanding.

Net Change (3 month) NA
Net Purchases (3 month) NA mil
Shares Purchased (3 month) NA mil
Shares Sold (3 month) NA mil

Stock Price Rationale

Determine if the stock price is justified by: growth-based value, comparative value, liquid assets, or dividends. The better the company, (in terms of growth or quality), the higher the valuation measures can be. And if valuation ratios are extremely low, double-check to see if the company appears excessively weak. In any case, you don't have to say yes to any valuation measure - many buy shares based on other factors (e.g., growth). But if you do that, at least understand what you're doing and consider the risks.

Viewing Things In Context

Many people erroneously work with valuation ratios calculated based on numbers that aren't truly representative of a company's underlying sustainable financial characteristics. Thus it's important to determine if today's sales and EPS are significantly depressed or elevated due to temporary factors such as business cycles. Higher ratios can be tolerated if sales and EPS are temporarily depressed. But if the company is experiencing unsustainable boom conditions, seek lower ratios. GAAP = Generally Accepted Accounting Principles.

Fiscal Year Ending						12/31/07	12/31/08	12/31/09E	12/31/10E
Sales/Share	NA	NA	NA	NA	NA	\$0.01	\$0.01	NA	NA
Price/Sales	NA	NA	NA	NA	NA	NM	45.22	NA	NA
EPS (GAAP)	NA	NA	NA	NA	NA	(\$0.12)	(\$0.26)	NA	NA
P/E (GAAP)	NA	NA	NA	NA	NA	NM	NM	NA	NA
EPS (Normalized)	NA	NA	NA	NA	NA	(\$0.12)	(\$0.26)	NA	NA
P/E (Normalized)	NA	NA	NA	NA	NA	NM	NM	NA	NA
Dividend Yield (%)	NA	NA	NA	NA	NA	0.00	0.00	NA	NA

Valuation Based On Growth

The faster a company grows, the higher its stock's P/E can be. Contrary to popular belief, PEG (P/E over Growth Rate) need not always be 1.00 or less. But all else being equal, lower is better (and 3.00 is usually too high). Try to favor company PEGs that are lower than industry and market PEGs. In all cases, watch for very high growth estimates. If overly optimistic projections get cut, PEG would wind up being higher. FY = Fiscal Year.

	Price/EPS (Est.) for Current FY	Price/EPS (Est.) for Next FY	Long Term Growth Estimate	Next FY P/E over LT Growth
Manas Petroleum Corporation	NA	NA	NA	NA
Oil & Gas Operations	20.00	15.72	8.32	1.93
S&P 500	18.00	15.12	10.19	2.06

Comparative Valuation Ratios

Valuation below industry or S&P 500 averages can be attractive - unless the company is materially worse in terms of quality growth prospects. Year-by-year trends in comparative valuations can give clues about company merit. Be especially on guard if comparative ratios are deteriorating over time. On the other hand, relatively low valuations that are moving toward the averages might indicate that the market is tuning in to heretofore under-appreciated company merit.

Dividends

Dividend is the most classic basis for stock valuation, and high dividend yields are usually deemed preferable. Today, with many companies reinvesting profits back into the business, moderate low yields can be accepted if dividends grow rapidly. The main risk is that poor performance will cause the dividend to be cut or omitted. A very high payout ratio is one warning signal. Another is a yield that is very high relative to industry peers.

TTM = Trailing Twelve Months.

Liquid Assets

Get a general sense of the extent to which the stock price is offset by the presence of assets that can be converted to cash immediately or in the near future. Often, these ratios will not be meaningful. Most companies are valued as ongoing businesses, rather than liquidation/buyout prospects. If you're looking at an especially troubled company, be aware that seemingly liquid-asset windfalls can be dissipated by continuing operating losses and/or shutdown costs.

Price to ...	MNAP	Industry
General Working Capital (current assets minus current liabilities)	(20.9)	28.0
Net Working Capital (current assets minus all liabilities)	(7.7)	(4.1)
Cash (& cash equivalents)	48.9	22.5
Cash minus total debt	(12.6)	15.1
Cash minus all liabilities	(5.7)	(2.6)

Footprints of Success

In many respects, business success requires subjective judgment. However, over time, good companies tend to leave good footprints, which become most visible when company data is compared to industry/sector/market benchmarks. That's how you see when companies perform well, not just because a rising business tide lifts all boats, but because the company is doing unique, good things. Look, too, at time-series comparisons, and take note of companies that are improving faster or suffering less than peers.

Growth Rates (%)

Investors are accustomed to looking at EPS growth. Check sales growth, too. EPS gains can't persist indefinitely without good sales growth. Do further investigation if sales trends are falling short. (A big short fall might reflect a divestiture. On the other hand, if sales growth looks too good, check to see if it's being boosted by an acquisition.) Also, compare sales growth to capital spending growth. Over a prolonged period, it's reasonable to expect capital spending growth to more or less keep pace with sales growth. If the latter is significantly higher, capital spending may have to accelerate in the next few years.

% Growth Rate	MNAP	Industry	Sector	S&P 500	Company Rank in Industry	MNAP vs. Industry	MNAP vs. Sector	MNAP vs. S&P 500

Worst Best □ = Co. underperforming ■ = Co. outperforming

Company Quality

Some companies excel in obtaining high margins (watch out for very low tax rates, which may reflect special benefits that often won't persist indefinitely) while others are highly efficient. Still others are strong in both respects. These trade-offs are balanced in the Management Effectiveness returns, which combine both factors. TTM = Trailing Twelve Months.

Financial Strength

Quick Ratio (cash and marketable securities divided by current liabilities) and Current Ratio (all current assets divided by current liabilities) give a sense of how readily the company could cover current obligations if the sales were to stop. Higher ratios indicate greater liquidity. Different businesses have different cash inflow-outflow characteristics, so compare companies to industry averages. Similar comparisons are relevant for debt ratios (higher ratios indicate more debt and, hence, more financial risk) and interest coverage (lower numbers signify greater risk).
