CodePartners Unveiled New Products at Sage Accpac Third Party Advantage Conference

Products designed to improve efficiencies for companies that use Sage Accpac ERP

Dallas, TX – September 2, 2009 – CodePartners, a software development firm, participated in the seventh annual Third Party Advantage Conference (TPAC) held August 30-September 1, 2009 in Vancouver, BC. During the exhibitor showcase, CodePartners unveiled two new products – Company Duplicator and CodePartners Excel Link – that improve efficiencies for business that use Sage Accpac ERP.

Company Duplicator allows users to duplicate non-transactional records from one company to another. There are options to select which module and record types within each module that will be duplicated. This is helpful in setting up a new company without historical transactions. The CodePartners Excel Link streamlines data entry in Sage Accpac by creating an Excel input template for all major transaction types. It is flexible and can emulate the same data format as an external source when needed. This improved data entry method enables companies to input data faster and more accurately.

“Our goal at CodePartners is to develop products that contribute to the success of our clients. Company Duplicator and CodePartners Excel Link simplify processes for businesses, thus saving time and improving efficiency,” said Bin Feng, president of CodePartners.

TPAC is an annual conference that showcases products that integrate with Sage Accpac ERP and SageCRM. “We continue to participate at TPAC, both as an exhibitor and a participant, because it is a great venue for us to connect with the partners who sell our products,” said Bin. “We look forward to going year after year.”
