

Graphics from 3D Liquid Skin— *Cutting Edge Print Technology*

3D Liquid Skin offers a full range of Products and Printing Services:

3D Liquid Skin® is economical and overcomes problems faced by conventional methods such as hot printing, screen printing, transfer printing, and conversion coating. The overall cost is less expensive!

We also do Custom Films/Graphics from your design or one of our graphic artist can design it for you. 3D's process was designed so that custom is more affordable than you might think.

Durability? We like to let our products speak for themselves. Some of our largest clientele are automobile and boat manufacturers who demand the highest standards of quality and durability. Many of their parts we print spend the majority of their lives in direct exposure, such as boat instrument panels. The clear coat we use is automotive grade, designed to withstand nature and time.

What is "3D Liquid Skin®"?

It's the process of applying industrial marine/automotive strength paint to a surface.

We can print practically any wood, plastic, metal, glass or non-porous item. If your item can be immersed in water, it can be run through our process. We can provide finishes such as carbon fiber, wood grains, marble, camouflage, abstract designs, and many more. We have access to literally thousands of different film images.

So, if you have a gun, bow, ATV, truck, car accessory, table top, cabinet,

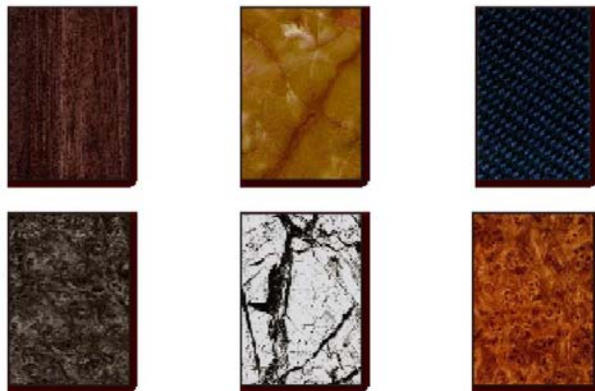

ceramics, glass or anything else you would like to enhance or add value - contact us!
