# e-Builder Enterprise 7
Capital Program & Project Management Software

Benefits

- Gain visibility into your forecast and avoid cost overruns or schedule delays

- Gain faster and easier access to more accurate information to eliminate claims

- Shorten project delivery cycles and reduce costs through standard, repeatable processes

- Shorten employee training and ensure that processes are always followed eliminating costly mistakes

- Deliver capital projects faster and at a lower cost - 1 to 2%.

e-Builder Enterprise is the most innovative capital program and project management system of its kind and the leading system for executing capital construction projects. Whether you are managing a single project, multiple projects, or multiple programs each with several projects, e-Builder Enterprise provides one integrated system to manage the cost, schedule, and scope of each project as it moves from planning to design, construction and occupancy. The system is modular, and is entirely accessible and configurable via the Internet, making it the fastest system to deploy.

Developed, refined and upgraded over 15 years with input from thousands of users ensures that e-Builder Enterprise's capabilities enable you to execute the most complex capital program with ease.

Over 5,000 companies involved in facility planning, design, construction, and operations leverage e-Builder to improve capital project execution. The results are increased productivity, accountability, and much tighter control over costs and schedule, which ultimately reduces costs and speeds time to market.

COST MANAGEMENT

Financial control and audit features in a secure environment help you improve how you manage your budgets across one project or your entire capital program. Create and track budgets during planning or construction, and conduct budget reviews, change management and approvals online. Quickly identify past, current, and future costs, commitments, and changes as a project progresses. Forecasting features enable you to accurately predict the cost-to-complete and cash flow needs to avoid unpleasant surprises.The Cost Module will also provide you with cost summaries across one or multiple projects with a couple of mouse clicks, with drill down capabilities for you to access more detailed information.

SCHEDULE MANAGEMENT

The Schedule Module integrates the power of CPM scheduling with the collaborative capabilities made possible with the Internet to provide a program-wide milestone tracking system. Efficiently manage schedule and scope changes from a central location that is accessible by the different project resources online. Integration with common desktop scheduling systems (e.g., Primavera, MS Project) lets you import existing project files. Track performance against a baseline, while the system automatically updates the critical path as you approve schedule changes and tasks are completed. Integrated Gantt views and reports give you a graphical perspective of your project's activities (completed, percent complete, behind, etc.), including project milestones that give you an accurate forecast of your project completion date, and an early-warning system to alert you about potential issues.

DOCUMENT MANAGEMENT

The central repository of all your project files, including documents, drawings, photographs, CAD files, and more. This central repository will help you ensure stakeholders work off of the most current file versions and collaborate using integrated markup tools. Project teams benefit from improved communications, faster data exchange, and improved collaboration by accessing files from one secure location. e-Builder tracks and records all activities (upload, view, download, email). Built-in version control automatically renames documents and files upon transfer, and a copy of previous versions is automatically generated. View over 250 file types in e-Builder using the integrated viewer without needing to have the application that created the file installed on your computer.

BUSINESS PROCESSES

The Processes Module is a sophisticated workflow engine that puts you in control of your processes. Choose between using rigid processes that make it easier to enforce your policies and procedures, or use flexible processes that let you test and refine new processes that can later be structured. Your project administrators will appreciate the ease with which they can create and configure workflow processes using the graphic Workflow Designer tool. You can easily map your own procedures or use e-Builder's best practices as a starting point. Electronic forms enable you to capture and route information based on business rules you define. Processes can be standardized across your entire program, or on an individual, project by project basis.

REPORTS & DASHBOARDS

Sift through, extract, and review information that can help you in your decision-marking process and reporting to project stakeholders. e-Builder includes a powerful but easy-to-use reporting engine that gives you control over how you view your data, without requiring third-party applications or programming knowledge. There are a limitless number of reports that can be created and 'pushed' to others in your firm. For instance, email reports to individuals and groups at predefined intervals (daily, weekly, monthly). Fully configurable executive dashboards provide a graphical representation of your project and program data using charts, graphs, and gauges you configure, and provide excellent visibility into the status of your projects and program key performance indicators.

INTEGRATION

e-Builder's Integration Tools make it possible for other systems to interact with e-Builder without extensive customization, and can handle different data elements using e-Builder's Web Service API and industry-standard XML data exchange formats. This makes the creation of interfaces that enable data transactions to occur across multiple systems (e.g., ERP, accounting, etc.) possible. Our integration model allows for easy integration of the e-Builder platform with other third-party or legacy systems to meet your specific requirements.
