

# SmartKey™ Innovations

## Revolutionary New Lock Technology:

SmartKey's innovative, patented side-locking bar technology eliminates the typical shear line, pins and tumbler mechanisms in its design, removing the most vulnerable points in residential locks. High quality stainless steel internal parts ensure smooth operation, increased strength and exceptional durability.

## Exceptional Security:

SmartKey deadbolts feature ANSI Grade 1 certification, improved drill resistance and BumpGuard™ to protect against lock bumping\*. Additionally, SmartKey has passed the most stringent lock picking standard (UL 437, par. 11.6) for further protection.

## Total Access Control:

SmartKey can be re-keyed in less than 30 seconds, without removing the lock from the door. By using the provided Learn Tool and functioning key, homeowners can match multiple locks to a single key, or replace a lost or loaned key with a new, secure key in three simple steps.
